OneLab 1.18

Waters™

OneLab Design & Execute

Unique software for the design and execution of lab protocols.

The pace of innovation in current day biological research demands the highest levels of reproducibility and traceability. Waters division for automation solutions (formerly Andrew Alliance), has developed an intelligent cloud-based software environment called OneLab within which experiments can be intuitively designed, repeatably executed, and tracked through a rapidly evolving ecosystem of connected devices and accessories that it is building together with partner organisations. Waters division for automation solutions has developed the Andrew+ Pipetting Robot and the Pipette+ Intelligent Pipetting System, both of which seamlessly connect with OneLab.

Waters division for automation solutions is constantly adding new capabilities, accessories and consumables to OneLab as indicated by this catalog which is updated on a regular basis.

Compatible

Incompatible

« on-the-fly » :
Only on-the-fly
dispensing is possible

1 500

Numeric value :
The minimal volume
in μL that the
consumable must
contain to allow
the use of the pipette
in OneLab

For more information about the care and use of Dominos and Devices, please check out our articles in the Help Center.

TABLE OF CONTENTS

DOMINOS

CONSUMABLE HOLDERS7

TIP INSERTION SYSTEM DOMINO

Sartorius 10 µL to 1200 µL Optifit non-filtered tips.....	8
Sartorius 10 µL to 1200 µL Safetyspace™ filter tips.....	9

10ML TIP RACK HOLDER DOMINO

Sartorius 10 mL Optifit non-filtered tips.....	10
--	----

5ML TIP RACK HOLDER DOMINO

Sartorius 5 mL Optifit non-filtered tips.....	11
Sartorius 5 mL Safetyspace™ filter tips.....	12

MICROPLATE DOMINO

ACC, Pyroclear® Pyroplate® 96-well microplate.....	13
ArcticWhite, 7 mL 12-column low-profile reservoir.....	14
CELLSTAR® 24-well cell culture plate.....	15
CELLSTAR® 6-well cell culture plate.....	16
Clickbio, VBLOK 200 mL V-bottom reservoir.....	17
Corning® 96-well U-bottom TC-treated microplate.....	18
Corning® 384-well low volume TC-treated microplate.....	19
Corning® CellBIND® 360 µL 96-well clear bottom black microplate.....	20
DURAN® 10 mL clear glass laboratory bottle in 2x3 position holder.....	21
DURAN® 25 mL clear glass laboratory bottle in 2x3 position holder.....	23
Eppendorf twin.tec® 96-well skirted LoBind® PCR plate.....	25
FrameStar® 0.1 mL 96-well skirted low profile PCR plate, clear wells.....	26
Greiner, 96-well U-bottom microplate.....	27
Greiner, 384-well standard microplate.....	28
Greiner, 96-well flat-bottom microplate.....	29
HardShell® 96-well low-profile skirted PCR plate, blue/clear.....	30
Hard-Shell® 384-well skirted PCR plate, black/white.....	31
Hard-Shell® 96-well low-profile skirted PCR plate, white/clear.....	32
ibidi, 24-well ibiTreat black µ-Plate w/ polymer coverslip bottom.....	33
ibidi, 96-well ibiTreat black µ-Plate w/ polymer coverslip bottom.....	35
MicroAmp™ 40 µL optical 384-well skirted reaction plate w/ barcode.....	37
MICROLON® 200 96-well U-bottom microplate.....	38
Nunc™ 6-well cell culture-treated plate.....	41
PerkinElmer, AlphaPlate-384 light gray microplate, untreated.....	42
PerkinElmer, DBS microplate.....	43
SAFE® 2D MX 500 external thread tube in 96x rack.....	44
Thermo Scientific™ 0.3 mL 96-well U-bottom MaxiSorp Immuno plate.....	46
TPP 12-well tissue culture test plate.....	47
Unchained Labs, Big Lunatic plate.....	49
UV-Star® µClear® 96-well half-area plate.....	51
Valita®/Titer assay plate.....	52
Waters 250 µL 384-square well collection plate.....	53
Waters 350 µL 96-round well collection plate.....	54
WebSeal 0.5 mL 96-well V-bottom plate.....	55

50ML CONICAL CENTRIFUGE TUBE DOMINO

CELLSTAR® 50 mL conical screw-cap tube.....	56
Corning® 50 mL conical centrifuge tube.....	57
Falcon® 50 mL conical centrifuge tube.....	58
Greiner, 50 mL conical bottom tube.....	59
Nunc™ 50 mL conical centrifuge tube.....	60

15ML CONICAL CENTRIFUGE TUBE DOMINO

CELLSTAR® 15 mL conical screw-cap tube.....	61
CELLSTAR® 15 mL conical screw-cap tube, bulk.....	62
Corning® 15 mL conical centrifuge tube.....	63
Falcon® 15 mL conical centrifuge tube.....	64

NUCLEOBOND XTRA MIDI COLUMN DOMINO

MACHEREY-NAGEL, NucleoBond Xtra Midi column.....	65
--	----

MICROTUBE DOMINO

Axygen® 1.5 mL Maxymium Recovery® snaplock microtube.....	66
Eppendorf 1.5 mL DNA LoBind® microtube.....	67
Eppendorf 2 mL DNA LoBind® microtube.....	68
Eppendorf 1.5 mL protein LoBind® microtube.....	69
Eppendorf 2 mL protein LoBind® microtube.....	70
Eppendorf 1.5 mL Safe-Lock tube.....	71
Eppendorf 2 mL Safe-Lock tube.....	72
Fisherbrand™ 0.5 mL free-standing microtube.....	73
Fisherbrand™ 2 mL skirted conical microtube.....	74
Fisherbrand™ Premium 1.5 mL microtube.....	75
Sarstedt, 0.5 mL skirted microtube with knurls.....	76
Sarstedt, 1.5 mL conical microtube.....	77
Sarstedt, 2 mL screw-cap microtube.....	78
STARLAB, TubeOne® 2 mL microtube.....	79

8-CHANNEL PIPETTE RESERVOIR DOMINO

INTEGRA 10 mL multichannel reservoir.....	80
---	----

96-PCR PLATE DOMINO

Eppendorf twin.tec® 96-well semi-skirted PCR plate.....	81
FrameStar® break-a-way PCR plate in 96x FrameStrip® adapter.....	82
FrameStrip® 8-well PCR tube strip in 96x FrameStrip® adapter.....	84
MicroAmp™ EnduraPlate™ 0.3 mL optical 96-well reaction plate w/ barcode.....	86
MicroAmp™ 0.2 mL Fast Optical 96-well semi-skirted reaction plate.....	87
MicroAmp™ 0.3 mL optical 96-well semi-skirted reaction plate.....	88
Multiply® 96-well non-skirted PCR plate.....	89
Roche LightCycler® 480 white 96-well plate.....	90
TempAssure® 0.2 mL 8-tube strip in Vari-Plate™ 96x frame.....	91
Thermo Scientific™ 96-well non-skirted PCR plate.....	92

5ML ROUND BOTTOM TUBE DOMINO

Falcon® 5 mL round bottom test tube.....	93
Fisherbrand™ 6 mL round-bottom glass tube with plain end.....	94
Sarstedt, 3.5 mL skirted V-bottom screw-cap tube.....	95
VACUETTE® 2 mL virus stabilization tube.....	96

DEEPWELL MICROPLATE DOMINO

24x 4 mL aluminum multi-well reaction block.....	97
24x 8 mL aluminum multi-well reaction block.....	98
48x 2 mL aluminum multi-well reaction block.....	99
96-well photoredox block assembly.....	100
Abgene™ 0.8 mL 96-deep well storage plate.....	101
AcroPrep™ 24-well collection plate.....	102
Agilent 6-column reagent reservoir.....	103
Agilent 12-column reagent reservoir.....	104
ArcticWhite, 21 mL 12-column reservoir.....	105
ArcticWhite, 73 mL 4-column reservoir.....	106
Axygen® 1.1 mL 96-round deep well U-bottom plate.....	107
Axygen® 12-well reservoir, 12-channel trough.....	108
Axygen® 8-well reservoir, 8-channel trough.....	109
BRAND® 1.1 mL 96-deep well U-bottom plate.....	110
Corning® 1.2 mL 8 cluster tube-strip in 96x rack.....	111
Corning® 2 mL 96-square deep well V-bottom plate.....	112
Eppendorf 1 mL 96-deep well protein LoBind® plate, yellow frame.....	113
Eppendorf 2 mL 96-square deep well plate, yellow frame.....	114
Fisherbrand™ 1 mL 96-well U-bottomDeepWell™ microplate.....	115
ILS, 12-channel reagent reservoir.....	116
KingFisher 96-deep well V-bottom plate.....	117
MagNA Pure 96 processing cartridge.....	118
Nunc™ 1.3 mL 96-DeepWell™ plate.....	119
Nunc™ 2 mL 96-DeepWell™ plate.....	120
Porvair, 2 mL 96-deep well U-bottom plate.....	121
SAFE® 2D/1D XLX 2000 external thread tube in 48x rack.....	122
Thermo Scientific™ 100 mL reagent reservoir.....	124
Cytiva, UNIPLATE 5 mL 48-well flat bottom plate.....	125
Cytiva, UNIPLATE 10 mL 24-well U-shaped plate.....	126
Waters 350 µL 96-square well collection plate.....	127
Waters 700 µL 96-round well collection plate.....	128
Waters 2 mL 96-square well collection plate, cut corner A1/H1.....	129
Waters 2 mL 96-square well collection plate, cut corner H1.....	130
Waters 10 mL 24-square well collection plate.....	131
WebSeal 2 mL 96-deep well U-bottom plate.....	132
WHEATON® 500 µL 96-well U-bottom medium µLplate®.....	133

0.5-0.6ML MICROTUBE DOMINO

Eppendorf 0.5 mL DNA LoBind® microtube.....	134
Eppendorf 0.5 mL protein LoBind® microtube.....	135
Eppendorf 0.5 mL Safe-Lock tube.....	136
Qubit™ 0.5 mL assay tube.....	137

20ML REACTION VIAL DOMINO

Chemglass, 20 mL screw-top reaction vial.....	138
VWR® 20 mL EPA screw neck vial.....	139

15ML TUBE COOLED DOMINO

Falcon® 15 mL conical centrifuge tube.....	140

Eppendorf 0.5 mL protein LoBind® microtube.....	141
---	-----

1.5ML MICROTUBE COOLED DOMINO

Eppendorf 1.5 mL Safe-Lock tube.....	142
Fisherbrand™ Premium 1.5 mL microtube.....	143
Sarstedt, 1.5 mL conical microtube.....	144

2ML MICROTUBE COOLED DOMINO

Sarstedt, 2 mL screw-cap microtube.....	145
---	-----

TABLE OF CONTENTS

96-PCR PLATE COOLED DOMINO	
Eppendorf twin.tec® 96-well skirted LoBind® PCR plate	146
50ML TUBE COOLED DOMINO	
Corning® 50 mL conical centrifuge tube	148
Falcon® 50 mL conical centrifuge tube	149
Nunc™ 50 mL conical centrifuge tube	150
500ML ROUND BOTTLE DOMINO	
Corning® 500 mL easy-grip storage bottle	151
PYREX® 500 mL wide-mouth storage bottle	152
16X90MM GLASS TUBE DOMINO	
10 mL flat-bottom screw cap test tube	153
16x100mm collection tube, IMPROVIRAL™ medium	154
16x100mm collection tube, virus preservation medium	155
ACC, Pyrotube® 16x90mm depyrogenated glass tube	156
Charles River, 16x90mm endotoxin-free glass tube	157
Radleys, GreenHouse Plus reaction tube	158
60X 15ML CENTRIFUGE TUBE RACK DOMINO	
Falcon® 15 mL conical tube in Sapidyne 60x rack	159
15ML TUBE IN 15X RACK DOMINO	
Sarstedt, 15 mL conical tube in Cytiva 3x5 position cassette	160
50ML TUBE IN 55X RACK DOMINO	
Sarstedt, 50 mL skirted conical tube in Cytiva 5x11 position rack	161
250ML BOTTLE IN 18X RACK DOMINO	
NOVOPLAST, 250 mL square bottle in Cytiva, 3x6 position rack	162
0.2ML MICROTUBE RACK DOMINO BUNDLE	
Thermo Scientific™ 0.2 mL PCR microtube, racked	163
1.2ML MICROTUBE RACK DOMINO	
STARLAB, 1.2 mL microtube in 96x rack	164
VIALS W/ 24X RACK DOMINO	
Supelco, graduated 7 mL screw-top glass vial in 24x rack	165
CULTURE TUBE W/ 48X RACK DOMINO	
Disposable 6 mL culture tube with straight rim	166
100ML BOTTLE MAGNETIC STIRRER DOMINO	
DURAN® 100 mL clear glass laboratory bottle	167
STORAGE PLATE DOMINO	
Agilent 2 mL 12x32mm screw-top vial in 54x vial plate	168
Azenta 0.9 mL external thread dual-coded tube in 96x rack	169
Azenta 3.8 mL external thread tri-coded tube in 48x rack	170
Eppendorf 0.5 mL 96-deep well protein LoBind® plate, yellow frame	171
Eppendorf 2 mL 96-square deep well plate, yellow frame	172
Azenta 1.5 mL external thread 2D tube in 48x rack	173
Azenta 1.9 mL external thread 2D tube in 48x rack	174
Matrix™ 0.5 mL V-Bottom screw-top tube in 96x rack	175
Matrix™ 0.75 mL blank storage tube in 96x rack	176
Matrix™ 1.4 mL 2D barcoded open-top tube in 96x rack	177
Matrix™ 1.4 mL alphanumeric storage tube in 96x rack	178
Milian, 1.2 mL transfer tube in Hitplate™ 96x rack	179
Waters 800 µL 96-round well collection plate	180
Waters 2 mL 96-square well collection plate, cut corner A1/H1	181
Waters 2 mL 96-square well collection plate, cut corner H1	182
Waters QuanRecovery™ 700 µL 96-well plate	183
Waters GlycoWorks™ 600 µL tubes in 96x plate	184
2ML CRYOGENIC STORAGE VIAL DOMINO	
Fisherbrand™ Cryogenic 2 mL external thread vial	185
8ML SAMPLE VIAL DOMINO	
WHEATON® LAB FILE® 8 mL standard clear sample vial	186
2ML HPLC VIAL RACK DOMINO	
Agilent 12x32mm screw-top vial w/ 0.3 mL insert in Waters 48x holder	187
Agilent 2 mL 12x32mm screw-top vial in Vanquish™ rack	188
Agilent 2 mL 12x32mm crimp-top vial in Genevac 48x holder	189
Agilent 2 mL 12x32mm crimp-top vial in Waters 48x holder	190
Deactivated 2 mL screw-neck amber glass vial	191
Fisherbrand™ 2 mL straight-sided shell vial in Waters 48x holder	192
Sarstedt, 1.2 mL QuickSeal screw-cap cryotube in Waters 48x holder	193
WVR® 1.2 mL internal thread cryogenic vial in Waters 48x holder	194
WVR® 1.5 mL short thread vial w/ wide opening in Waters 48x holder	195
Waters 1 mL LC/GC screw-top vial in 48x holder	196
Waters 2 mL 12x32 mm LC/GC screw-top vial in 48x holder	197
14ML ROUND BOTTOM TEST TUBE DOMINO	
Falcon® 14 mL round bottom test tube	198
22ML GLASS VIAL DOMINO	
Supelco, 22 mL screw-top amber glass vial w/ Thermoset cap	199
Thermo Scientific™ 22 mL screw-top sample vial	200
Ø9MM GLASS VIAL DOMINO	
Fisherbrand™ 1 mL short-style glass shell vial	201
KIMBLE® 1 mL clear glass shell vial	202
4ML AUTOSAMPLER VIAL DOMINO	
Fisherbrand™ 4 mL screw-top autosampler vial	203
SCIEX UNIVERSAL VIAL DOMINO	
SCIEX Universal Vial	204
SCIEX 6X6 TRAY DOMINO	
SCIEX Universal Vial in 6x6 tray	205
8-CHANNEL RESERVOIR COOLED DOMINO	
INTEGRA 10 mL multichannel reservoir	206
24-WELL PHOTOREDOX BLOCK DOMINO	
24-well photoredox block assembly	207
WES AND JESS PLATE DOMINO	
ProteinSimple, Wes/Jess plate	208
13ML TUBE DOMINO	
16x100mm collection tube, COPAN UTM® medium	209
DigiTUBE 15 mL 17x100mm autosampler tube	211
Sarstedt, 13 mL U-bottom screw-cap tube	212
BRAND® 1.2ML MICROTUBE RACK DOMINO	
BRAND® 1.2 mL 8-strip tubes in 96x rack	213
NALGENE™ 15ML BOTTLE DOMINO	
Nalgene™ 15 mL HDPE diagnostic bottle	214
NALGENE™ 60ML BOTTLE DOMINO	
Nalgene™ 60 mL narrow-mouth HDPE bottle	215
NALGENE™ 125ML BOTTLE DOMINO	
Nalgene™ 125 mL narrow-mouth HDPE bottle	216
2ML CRYOTUBE RACK DOMINO	
Cryo.s™ 2 mL external thread tube in Waters 48x holder	217
WVR® 2 mL free-standing cryogenic vial in Waters 48x holder	218
TILTED MICROPLATE DOMINO	
CELLSTAR® 24-well cell culture plate	219
Corning® CellBIND® 360 µL 96-well clear bottom black microplate	220
Falcon® 6-well cell culture plate, tilted wells	221
ibidi, 96-well ibiTreat black µ-Plate w/ polymer coverslip bottom	222
TPP 12-well tissue culture test plate	226
20ML C15 B GLASS VIAL DOMINO	
20 mL C15 B glass vial	228
FLAVER 30ML GLASS VIAL DOMINO	
FLAVER, 30 mL glass vial	229
Nalgene™ 30 mL narrow-mouth HDPE bottle	230
FLAVER 60ML GLASS VIAL DOMINO	
FLAVER, 60 mL glass vial	231
250ML DURAN BOTTLE DOMINO	
DURAN® 250 mL clear glass laboratory bottle	232
Normax, 250 mL screw-cap laboratory bottle	233
29ML GLASS CULTURE TUBE DOMINO	
Globe Scientific, 29 mL 18x150mm glass culture tube	234

TABLE OF CONTENTS

384-PCR PLATE COOLED DOMINO
MicroAmp™ 40 µL optical 384-well skirted reaction plate w/ barcode.....235

NALGENE™ 175ML BOTTLE DOMINO
Nalgene™ 175 mL square wide-mouth HDPE bottle.....236

20ML SERUM VIAL DOMINO
WHEATON® 20 mL clear glass serum vial237

10ML SERUM VIAL DOMINO
WHEATON® 10 mL clear glass serum vial238

5ML SERUM VIAL DOMINO
WHEATON® 5 mL clear glass serum vial239

Ø12.5MM TUBE AND VIAL DOMINO
ArcticWhite, 2 mL self-standing external thread cryovial with lip seal.....240
ArcticWhite, 3 mL self-standing external thread cryovial with lip seal.....241

Ø13MM TUBE DOMINO
13x84mm collection tube, virus preservation medium242
BD Vacutainer® 2 mL EDTA blood collection tube243
Fisherbrand™ 10 mL round-bottom glass tube with plain end244

LONG EDGE TILT DEEPWELL DOMINO
ArcticWhite, 290 mL single cavity reservoir245
Axygen® 96 V-bottom single well reservoir.....246

5ML MICROTUBE DOMINO
Eppendorf 5 mL DNA LoBind® microtube.....247
Eppendorf 5 mL protein LoBind® microtube.....248
Eppendorf 5 mL Tube® with screw cap249
Eppendorf 5 mL Tube® with snap cap.....251
WVR® 5 mL snap-cap centrifuge tube.....253

12MM VIAL DOMINO
Waters 300 µL 12x32mm screw neck vial.....254
Waters 700 µL 12x32mm screw neck vial255
Waters QuanRecovery™ 300 µL 12x32mm screw neck vial256

Ø16MM VIAL DOMINO
SCHOTT FIALAX® 2 mL clear glass vial257

LABELED TEST TUBE DOMINO
BD Vacutainer® 4 mL EDTA blood collection tube.....258
VACUETTE® 3 mL K2EDTA collection tube259
VACUETTE® 6 mL Trace Elements Sodium Heparin tube.....260
VACUETTE® 4 mL Z No Additive collection tube.....261

NON-ANSI PLATE DOMINO
Nunc™ 0.3 mL 96-MicroWell™ plate262

Ø16MM 30X TUBE DOMINO
DURAN® 17 mL 16x130mm test tube with straight rim.....263
Globe Scientific, 14 mL 16x100mm glass culture tube264
Globe Scientific, 19 mL 16x125mm glass culture tube265

Ø28MM TEST TUBE DOMINO
Lenz 28x150mm test tube with NS 24/29 socket.....266

RACKED TUBES DOMINO
Micronic 1.1 mL 2D-coded internal thread V-bottom tube in 96x rack.....267
Micronic 1.4 mL 2D-coded internal thread V-bottom tube in 96x rack.....269
Micronic 3 mL 2D-coded external thread Flat-bottom tube in 48x rack.....271

Ø46MM BOTTLE DOMINO
DURAN® 50 mL amber glass laboratory bottle.....273

Ø55MM 10X BOTTLE DOMINO
DURAN® 100 mL clear glass laboratory bottle274

COLLECTION LABWARE RACK DOMINO
ArcticWhite, 290 mL single cavity reservoir.....275
Axygen® 96 V-bottom single well reservoir276
WVR® 5 mL snap-cap centrifuge tube, racked277
Waters QuanRecovery™ 300 µL 12x32mm screw neck vial, racked.....278
Waters 300 µL 12x32mm screw neck vial, racked279

Sartorius 10 µL to 1200 µL Optifit non-filtered tips

Sartorius 10 µL to 1200 µL Optifit pipette tips; Non-filtered; Made of virgin polypropylene; Designed for best fitting and leak-tight sealing on Waters Bluetooth pipettes (manufactured by Sartorius based upon the Picus® range of electronic pipettes), ensuring maximum pipetting accuracy, performance and precision; Enable ergonomic, light tip attachment and ejection by being compatible with the Optiload® and Optiject® features of Sartorius electronic pipettes; High-quality standard tips and excellent solution for various applications; Supplied in various packaging types for all needs, i.e., single tray racks (purity certified), refill packs (purity certified), refill towers, FlexiBulk® boxes, and standard bulk; Optifit tip trays are colour-coded for easy matching with a corresponding, colour-coded pipette; purity certified tips are manufactured in ISO 8 classified clean room conditions to avoid any contaminations and are tested for DNase, RNase and endotoxins per each tip lot; Pre-sterilized and low retention (fully hydrophobic and highly liquid-repellent surface) tips are available for sterile work and maximum sample recovery, respectively; Low retention format is beneficial in sensitive biochemistry and molecular biology applications, where reagents often contain viscous substances and detergents (e.g. PCR, sequencing, protein purification and analysis); Other options include extended (for better reach) and wide-bore tips for specific needs; Fully autoclavable (121°C, 20 minutes)

Sartorius 10 µL to 1200 µL SafetySpace™ filter tips

Sartorius 10 µL to 1200 µL SafetySpace™ filter tips; Tips are made of virgin polypropylene (PP) and the filter of polyethylene (PE) without any self-sealing additives (avoid any interference with the sample and the results); Designed for best fitting and leak-tight sealing on Waters Bluetooth pipettes (manufactured by Sartorius based upon the Picus® range of electronic pipettes), ensuring maximum pipetting accuracy, performance and precision; Enable ergonomic, light tip attachment and ejection by being compatible with the Optiload® and Optiject® features of Sartorius electronic pipettes; The filter barrier provides protection against (cross-)contamination of samples and/or the pipette shaft in demanding applications such as molecular biology, microbiology, cell culture and radioactive work; Offer more space between the sample and the filter than conventional filter tips, which prevents the risk of the liquid coming into contact or permeating the filter; The extra space is particularly useful when handling foaming liquids such as buffers and proteins, pipetting solvents, using multiple dispensing functions of electronic pipettes or reverse pipetting; Supplied pre-sterilized and purity certified (Free of DNase, RNase, endotoxins) packed in colour-coded single tray racks for easy matching with a corresponding, colour-coded pipette; Available in low retention format (fully hydrophobic and highly liquid-repellent surface for maximum sample recovery) - beneficial in sensitive biochemistry and molecular biology applications, where reagents often contain viscous substances and detergents (e.g. PCR, sequencing, protein purification and analysis); Not available in 10 mL volume range

**Clickbio, VBLOK 200 mL
V-bottom reservoir**

200 mL V-bottomed reservoir with a low dead volume of < 1 mL; Made of virgin, medical-grade polypropylene (PP); Features a high-polish inner surface to ensure all liquid pools in the V-bottom channel for maximum sample recovery; Originally designed as a centrifuge collection vessel to recover or pool liquids from multi-well plates – the VBLOK200 reservoir can support inverted plates, turned downward towards the bottom of the reservoir, and subsequently undergoes centrifugation as an assembly to quickly collect/remove all liquid from a 24-, 96-, 384-, or 1536-well plate without using pipette tips, thereby improving sample recovery compared to manual or automated pipetting from each well; Can be used as a low dead volume reagent reservoir for 8-channel pipetting, ideally in automation workflows where reagent waste reduction is paramount – the unique design funnels all liquid to the center where it is accessible for pipetting with an 8-channel pipette; Suitable for applications, such as Next Generation Sequencing (NGS) library pooling, recovery of antigen or primary antibodies during ELISA plate preparation, and coating tissue culture plates; Conforms to ANSI/SLAS microplate standards – Automation-compatible reservoir; E-beam sterilization is optional

Manufacturer:
ClickBio

Corning® CellBIND® 360 µL 96-well clear bottom black microplate

Corning® CellBIND® 360 µL 96-well microplate; Features wells with black walls and a clear flat bottom; CellBIND® surface is a cell culture treatment that increases surface wettability (more hydrophilic) and stability for more even and consistent cell attachment; CellBIND® enhances cell attachment under challenging conditions, such as reduced serum or serum-free medium, resulting in higher cell growth and yields; CellBIND® eliminates the need for low-stability biological coatings for cell attachment and enables better cell recovery of primary cell isolates; Cell growth area of 0.32 cm²; Recommended medium volume of 100 - 200 µL per well; Wells with black walls guarantee lower background in fluorescent assays and reduce cross-talk; Supplied with a non-reversible, low-evaporation lid with condensation rings to reduce contamination; Individual alphanumeric codes allow easy well identification; CellBIND® surface requires no refrigeration/storage or special handling and is stable at room temperature

DURAN® 10 mL clear glass laboratory bottle in 2x3 position holder

DURAN® 10 mL original laboratory bottle; with GL 25 thread; 33x55 mm size; Moulded from high-purity, clear, type I borosilicate glass 3.3 – guarantees high chemical resistance, virtual inert behavior, and a high maximum temperature tolerance with minimal thermal expansion; Loaded into a DURAN® ANSI/SLAS microplate aluminum holder (DWK LS, p/n 292330802) that accommodates up to six bottles in a 2x3 arrangement, allowing small DURAN® 10 mL GL 25 bottles to be used on the deck of many liquid handling robots and automated pipetting systems; The holder conforms to microplate footprint dimensions in the ANSI/SBS standards; DURAN® laboratory bottles provide high light transparency for easy content and volume checking; Characterized by a uniform wall thickness; Very steady due to a large base; Feature an easy-to-read graduated volume scale and a highly durable white marking field; Considered the gold standard of multifunctional laboratory bottles; Ideal for long-term storage, sample preparation, transport, and autoclaving media; Can be used in stability testing of new drug substances as analogs for the larger DURAN® bottles; Serves as a robust, thicker-walled alternative to vials made from glass tubing; The combination of high-performance materials and robust design provides long working life; The DURAN® aluminum holder achieves high thermal conductivity and therefore can be used with microplate heating or cooling systems; DURAN® laboratory bottles should be heated gradually when using an electronic heating plate or water bath; NOT suitable for use under pressure or in a vacuum; Supplied complete with a matching blue polypropylene (PP) screw cap equipped with drip-free pouring ring for use up to 140°C – achieves tight sealing and simple, clean pouring; Suitable for autoclaving – all components are fully autoclavable at 121 or 134°C

Eppendorf twin.tec® 96-well skirted LoBind® PCR plate

Eppendorf twin.tec® 96-well PCR plate; Green frame; Fully skirted; One-piece design – combines a polycarbonate (PC) frame and polypropylene (PP) wells for optimum performance; Features an exceptionally solid, robust PC frame for ultimate rigidity and torque resistance; Certified PCR clean; PP clear conical wells with DNA LoBind® properties – a combination of special manufacturing technologies and selected polypropylene batches ensures maximum recovery rates of nucleic acids by significantly reducing their adsorption to the wall of the wells (low DNA binding affinity, nearly 100% recovery of DNA/RNA molecules); Free of surface coatings, thereby eliminating the risk of sample contamination; The low profile design enables low volume PCR; 150 µL maximum well volume when used with cap strips (strips with eight microcaps, with a flat or domed shape); Extremely thin-walled wells guarantee optimum and consistent heat transfer to the sample; Raised well rims provide effective sealing and reduce the risk of cross-contamination; Ideal for quantitative real-time PCR with low sample concentration and PCR amplification with low template concentration; Suitable for low volume PCR/qPCR reactions and NGS DNA library preparation; Specially designed to reduce the loss of target molecules and maximize yields in PCR and other molecular assays for better sensitivity and improved assay results; Compatible with automated systems; Skirted design allows for optimal use with automation and for labelling or barcoding (upon request); Stackable; OptiTrack® matrix for faster sample identification and fewer pipetting errors

FrameStar® 0.1 mL 96-well skirted low profile PCR plate, clear wells

FrameStar® 96-well skirted PCR plate; Low profile - decreases the «dead space» between the heated lid of the thermal cycler and the sample, which eliminates condensation forming on the side wall of the wells, preventing reduction in PCR volume and increasing the efficiency of the reaction; Displays 0.1 mL clear conical PP wells and a black PC frame with cut corner H1; Features ultra-smooth, uniform, thin-walled wells - enable optimal PCR and qPCR performance and results; The «RIG» option is characterized by an extra rigid skirt for use with automation systems - prevents the robotic gripper picking up more than one plate at a time; The rigid PC frame offers added mechanical stability and helps reducing thermal expansion and sample evaporation, thus delivering more consistent PCR results; The thermal stability of the rigid frame improves seal integrity; Specially recommended for low volume reactions (< 20 µL) such as low volume PCR; Compatible with the majority of standard 96-well PCR thermal blocks as well as real-time PCR and sequencing instruments; Lid option using the FrameStar® 96 NGS Lid (p/n 4ti-0287); Stackable

Greiner, 384-well standard microplate

384-well standard microplate; Rounded square wells - square geometry with rounded corners; Flat solid bottom; This design combines the advantages of the square well, i.e. increasing volume capacity and surface area, with the advantages of a round well, such as minimizing wicking and reducing air bubble formation; Displays a high degree of optical clarity; Facilitates assay miniaturization to very low reagent volumes and final working volumes as low as 10-15 µl; Maximum well volume is considerably reduced from 382 µl to 138 µl compared with a 96-well standard microplate; Stackable; This product (item # 781101) is only available at Greiner Bio-One North America (USA); For EU users, the same product is available at VWR (catalog # 82051-298)

HardShell 96-well low-profile skirted PCR plate, blue/clear

HardShell 96-well PCR plate; Blue rigid frame (shell) with clear wells; Fully skirted for optimal robotic handling and labeling surface; Low-profile wells (16.05 mm) are optimized for low-volume reactions and fast PCR; Recommended reaction volumes of 5 to 125 μ L (200 μ L maximum); Uniform, thin-walled wells of polypropylene facilitate rapid and precise heat transfer and reduce well-to-well variability in optical assays; The rigid, two-component design provides superior stability and flatness, allowing precise positioning for automation; Specifically designed to withstand the stresses of robotic handling and thermal cycling; Footprint and well spacing match ANSI/SBS standard dimensions; Compatible with automated systems; with black lettering for easy well identification; For research use only, not for use in diagnostic procedures

Hard-Shell® 384-well skirted PCR plate, black/white

Hard-Shell® 50 µL 384-well PCR plate; Fully skirted – ideal for automation; Exhibits a black shell and white wells – ensure maximum reflection of fluorescent light in real-time PCR (qPCR) and other fluorescence assays (higher fluorescent signals) and reduce interfering background fluorescence (well-to-well crosstalk), thereby improving the sensitivity of qPCR reactions, reproducibility, and consistency of results; Characterized by a patented, rigid two-component design specifically engineered to withstand the stresses of thermal cycling, robotic handling and heat sealing; Features thin-wall wells allowing optimal thermal transfer (fast PCR) and superior well-to-well uniformity in optical assays such as those performed in real-time qPCR; Conical well bottom for maximum sample recovery; Delivers reliable performance in all PCR and real-time PCR applications; Features a white alphanumeric labeling for easy well identification; Footprint and well spacing match ANSI/SBS standard dimensions; NOTE: This product is no longer available (discontinued). The Hard-Shell® 384-well skirted PCR plate, clear/white (p/n HSP3805) is recommended as a replacement

Hard-Shell® 96-well low-profile skirted PCR plate, white/clear

Hard-Shell® 200 µL 96-well PCR plate; Fully skirted – provides a labeling surface and is ideal for automation; Exhibits a white shell and clear wells; Characterized by a patented, rigid two-component design specifically engineered to withstand the stresses of thermal cycling, robotic handling and heat sealing; The skirt and deck are made from a rigid thermostable polymer – prevents the distortion and shrinkage that may occur when regular single-component polypropylene PCR plates are exposed to high temperatures; The thin-wall wells are molded of virgin PP resin with low DNA binding properties, allowing optimal thermal transfer (fast PCR) and superior well-to-well uniformity in optical assays such as those performed in real-time qPCR; Conical well bottom for maximum sample recovery; Low-profile wells optimized for low-volume reactions and fast PCR reactions; The raised rims around each well ensure tight sealing using a variety of methods (e.g. pressure, adhesive and heat sealing); Sturdy plate with rigid skirt – well-suited for heat sealing; Warp-resistant plate – provides durability during automation, high-speed centrifugation, and storage (even at -80°C); Shows a superior stability and flatness allowing precise positioning and robotic handling; Delivers reliable performance in all PCR and real-time PCR applications; Features a black alphanumeric labeling for easy well identification; User-readable bar code options for convenient sample tracking in high-throughput settings; Footprint and well spacing match ANSI/SBS standard dimensions

ibidi, 24-well ibiTreat black μ -Plate w/ polymer coverslip bottom

24-well black μ -Plate; Round, ID 14 mm wells with 1 mL working volume and a clear, flat bottom – Exhibits excellent inner and whole plate flatness; Made of a black polymer material – black walls guarantee low well-to-well crosstalk in fluorescence microscopy; Features high-quality #1.5 ibidi Polymer Coverslip, which is a thin plastic coverslip that forms the bottom of the imaging plate with a standard No. 1.5 coverslip thickness of 180 μ m (+10/-5 μ m) and that exhibits extremely low birefringence and autofluorescence, similar to that of glass; ibidi Polymer Coverslip is gas-permeable allowing for partial gas exchange between the medium and the incubator's atmosphere (should not be covered); The hydrophilic « ibiTreat » surface of the plate bottom is physically treated for enhanced cell adhesion of most cell types, even without a defined protein coating, while fully retaining optical quality; ibiTreat surface is ideal for the direct culture of many adherent cell lines (including primary cells) that do not need any specific coating and offers optimal growth conditions for various cell-based assays (note that ECM protein coatings can be done on ibiTreat without any restrictions); Each well provides a coating area of 4.4 cm² and a growth area of 1.54 cm²; ibidi Polymer Coverslip is compatible with solvents commonly used for cell staining and fixation (e.g. Formaldehyde) and a list of recommended immersion oils (e.g., ibidi immersion oil, p/n 50101) when using oil immersion objectives; Meets all optical requirements for microscopes; Allows to perform high-resolution microscopy in a standard multi-well format through the ibidi Polymer Coverslip bottom with the highest optical quality and without any disruptive autofluorescence; Suitable for various imaging and fluorescence-based techniques with uncompromised resolution and choice of wavelength including phase contrast, DIC, widefield fluorescence imaging, confocal microscopy, two-photon microscopy, FRAP, FRET, FLIM, or LSM; Designed for high-end microscopic analysis of fixed or living cells – To analyze cells, no special preparations are necessary. Cells can be directly observed live or fixed through the bottom, preferably on an inverted microscope; Optimized for high-throughput assays and screenings; For optimal results in fluorescence microscopy and storage of fixed and stained samples, mounting media (p/n 50001 and 50011) are available by ibidi; Useful in a wide range of applications including fluorescence-based imaging of living or fixed cells, high throughput screening (HTS) in cell culture, wound healing experiments with ibidi Culture-Inserts, large-scale transfection experiments as well as immunofluorescence assays; Compatible with automation equipment due to the standard ANSI/SLAS (SBS) plate format and dimensions; Suitable for use with fluorescence scanners; Features standard well numbering (A-D, 1-6); Temperature-stable up to 80°C/175°F; Stackable to save space in the incubator (up to 6 plates max due to stability reasons); Intended for one-time use and is not autoclavable; Shelf life under proper storage conditions (in a dry place, RT 15-25°C, no direct sunlight) is 36 months; Supplied with a lid; Sterilized and welded in a gas-permeable packaging

MicroAmp™ 40 µL optical 384-well skirted reaction plate w/ barcode

MicroAmp™ 40 µL optical 384-well reaction plate with barcode; Skirted – fits securely over a thermal cycler with a raised block and provides enhanced mechanical strength for use with robotic platforms; Conical well bottom; Standard well profile – delivers standard reaction speed; Flat deck enabling a universal fit with most thermal cycles and facilitating sealing and handling; Constructed from a single rigid piece of polypropylene (PP) in a 384-well format – can withstand rapid changes in temperature and helps to minimize absorption of reaction components, Displays frosted wells to minimize interfering fluorescence from wells of cycling block – alternative to white plastic for qPCR if the fluorescence detector is oversaturated; Features a unique design that provides a barrier to ambient air to help ensure well-to-well temperature uniformity; Each reaction plate includes a unique serialized, eight character number barcode that is user- and machine-readable to allow error-free tracking; Designed to provide superior temperature accuracy and uniformity for fast, efficient PCR amplification for all samples; Compatible for use with Applied Biosystems™ PCR thermal cyclers, 384-well real-time PCR systems, and various genetic/ DNA analyzers; Ideal for high-throughput applications; Sealing using optical adhesive films (p/n 4311971) ensures high optical efficiency and tight sealing over wells to prevent evaporation and cross-contamination; with engraved/molded alphanumeric labeling for well/sample identification; May be stored at room temperature

Nunc™ Edge™ 96-well cell culture-treated microplate

Nunc™ Edge™ 96-well microplate; Round wells with flat bottom; Low flange design – ensures reliable handling in robotic operations; Nunclon™ Delta-treated surface – promotes maximum cell attachment and growth; Nunclon™ Delta cell-culture treatment is certified for monolayer formation, cloning efficiency, non-cytotoxic, non-pyrogenic, and sterility; Culture area is about 0.35 cm² per well; Features a surrounding/large perimeter built-in moat divided into 4 sectional reservoirs, each can be filled with 1.7 to 2.0 mL sterile water or media – serves as an evaporation barrier during extended incubation, enhancing cell viability and significantly reducing well-to-well variability across the entire plate; The uniquely engineered Nunc Edge 2.0 96-well plate is designed to minimize evaporation of cell culture medium from the plate and the risks associated with the “edge effect” that may occur on a standard 96-well plate; Suitable for various applications including cell-based assays, binding assay, high throughput screening; The use of the Nunc Edge 2.0 96-well plate can increase the throughput of assays by 37.5% over that of typical cell-based assays that use only the 60 inner wells of the plate; Compliant with the ANSI microplate standards; Compatible with robotic liquid handling stations as well as automated cell detection and cell analysis equipment (e.g. Thermo Scientific™ Varioskan™ LUX); When used with the Thermo Scientific™ Varioskan™ LUX multimode microplate reader, the filled moat of the plate functions as passive humidity control, allowing for simultaneous incubation and signal detection during long-term applications with living cells inside the plate reader without significant evaporation of the liquid in the sample wells; Supplied with a lid that maximizes ventilation while maintaining sterility; RECOMMENDATION: Replenish fluid in the reservoirs every 3 days in the humidified incubator to ensure the effectiveness of the evaporation barrier

Nunc™ 6-well cell culture-treated plate

Nunc™ 6-well cell culture plate; Round wells with flat bottom; Nunclon™ Delta-treated surface - promotes maximum adhesion for a broad range of cell lines; The hydrophilic property conferred by the Nunclon™ Delta treatment enables adherent cells to attach and grow; Culture area is about 9.6 cm² per well; Raised well rims - lowering the risk of cross-contamination; Recessed areas around wells act as a water reservoir to reduce evaporation from wells; The open format with the raised well rim enables convenient and secure manipulation of the cells; Offers excellent optical quality; Suitable for all areas of cell culture including scale-up and cloning; Features a vented lid for optimal gas exchange - notched corners facilitate one-way lid orientation; Stackable; The recommended working volume depends largely on the cell line and working conditions - it is approximately 3 mL for the 6-well multi dish, but may have to be modified for best performance

SAFE® 2D MX 500 external thread tube in 96x rack

SAFE® 2D coded, 500 µL medium size storage tube with external thread (MX 500) loaded into a 96x ANSI/SBS standard footprint rack with a slide lock lid (LVL technologies, p/n RCK-MX96SLP-L); Tubes feature a white on black, permanent data matrix code laser-etched on their base (2D bottom code) - highly resistant to chemical and thermal influences, easily legible thanks to excellent contrast, enabling fast and reliable identification of samples; Without 1D side barcode and human readable; Closure with external thread - minimizes risks of cross-contamination comparing to solutions with internal thread; Pre-capped with blue screw caps characterized by a special, patented two-phase TPE compression, which guarantees a tight seal against liquid leakage (sealing of the liquid phase) and minimizes the ingress and leakage of potential gases (sealing of vapour phase), thereby enabling safe, long-term storage; SAFE® 2D Tubes are made of low binding pure polypropylene ensuring reaction-free sample storage; Tubes have polished surface for excellent transparency and visual control of content volume; SAFE® 2D Tubes display an outer flat bottom for good legibility and an internal round (U-shaped) bottom for low dead volume; Tubes have an enlarged wall thickness for greater physical stability during the freezing process or in case of repeated freezing cycles (thermal resistance); The dimensional stability or the stable position of tubes in rack is crucial for easy picking; The 96 SBS rack is made of robust polypropylene and is extremely stable due to its geometric shape; The rack is labelled with a 1D code on its narrow side and a 2D orientated code on the bottom; The rack/tube system is stackable and compatible with automated systems (e.g; storage, liquid handling); SAFE® 2D Tubes and racks are suitable for storage at temperatures as low as -196°C in the vapour phase liquid nitrogen; SAFE® 2D Tubes are used for the storage and logistics of valuable samples in various applications including biobanking, transfusion medicine, compound management, kit manufacturing (e.g. oligos and other synthetic chemicals) and forensics; Sterilization comes as an added option and is recommended in forensics and for the storage of cells

TPP 12-well tissue culture test plate

TPP tissue culture test plate; 12 wells; Made of clear, transparent Polystyrene (PS) for excellent viewing; Flat (F-base) growth surface of 3.466 cm²; The growth area, precisely on the spherical zone of the well only but not its sidewall, is opto-mechanically activated for optimal adhesion of cells to the plastic surface, resulting in plane and growth enhancing surface that has an optimal proliferation effect; The air-venting system of the lid consists of spacer cams located on the inside of the lid that guarantee controlled and constant gas and moisture exchange with minimal evaporation for optimal aeration of the culture; Designed for the cultivation and growth of cells as well as for cell-based assays, such as cell viability and microbial growth assays; Not suited for use in ELISA tests due to the low binding capacity of the TPP plate; Maximum medium volume of 5 mL per well; Recommended working medium volume of 1-2 mL per well; Exhibits excellent optical characteristics; Suitable for precise photometric measurements (the measuring light is not distracted by the geometry) as well as microscopy applications (bottom reading); Compatible with an appropriate adjustment on common absorption plate readers and cell imaging systems; Recommended for measurements at >300 nm; Not suitable for luminescence measurements; Features a yellow marking area on the side of the lid and the plate for writing and correct lid orientation; The sloped corner allows placement of the lid in one position only; The ridged grip area ensures a secure grasp and better handling and prevents from accidentally lifting off the lid; A black alpha-numerical labelling is used on the side for quick and easy identification of wells; The clear alpha-numerical identification mark next to each well simplifies the orientation during operations under microscope; The stacking rim enables safe stacking of several plates, also in combination with other TPP plates of different well number; The air vents in the plate base or the bottom rim provide consistent air-flow and heat distribution in the incubator even between stacked plates and consequently prevent condensation; For centrifugation, the use of suitable rotors or centrifuge adapters is recommended; Shows a uniform base area in accordance with the recommendations of ANSI 1-2004; For research use only and not intended for use in clinical, diagnostic or therapeutic procedures; Intended for single use only; Storage before use at room temperature and protect from UV light

Unchained Labs, Big Lunatic plate

Big Lunatic plate; Polystyrene frame; SBS-compatible microplate format; Fits up to 6 individual Lunatic strips; For use with Big Lunatic UV/Vis reader for quantification of protein and nucleic acids; Lunatic strips feature 16 proprietary microfluidic circuits moulded from a low-absorbance cyclic olefin copolymer (COC) plastic – allow high optical transmission over the full UV-VIS spectrum with high accuracy and guarantee the absence of cross-contamination or evaporation; Each circuit contains five main features: conical-shaped input well, capillary storage channel (sample retention time = up to 2 hours without evaporation), measurement microcuvette(s) with fixed path length, overflow reservoir, and vent hole (connection point with the pump of the Lunatic system during a read); Two types of Lunatic strips can be mounted onto the big Lunatic plate: “Regular Lunatic strips” with single microcuvette in each circuit for low concentration samples, typically nucleic acids (0.5 mm path length, dynamic range = 0.03-40 O.D. 10 mm, [protein] = 0.03-40 mg/mL, [dsDNA] = 1.5-2,000 ng/ μ L) and “High Lunatic strips” with 2 adjacent microcuvettes for high concentration samples, typically proteins (0.1 and 0.7 mm pathlengths, dynamic range = 0.03-275 O.D. 10 mm, [protein] = 0.03-275 mg/mL, [dsDNA] = 1.5-13,750 ng/ μ L); Lunatic plates enable the analysis of up to 96 samples at a time in about 5 min using only 2 μ L of sample (16 samples per strip, 2 μ L per circuit) – no dilution, dyes or extra reagents required; The Lunatic system performs high-speed UV/Vis spectral analysis – measures absorbances from 0.03-40 O.D. (regular Lunatic plate) or 0.03-275 O.D. (high Lunatic plate) for each sample across the full UV/Vis spectrum from 230-750 nm; Lunatic strips are compatible with most buffers used in life sciences research (e.g. Tween 80 10%, DMSO 100%, Triton X-100 0.01%, SDS 0.5%, etc...); Lunatic plates can easily be integrated with robotic liquid handlers for use with single or multichannel pipettes to enable hands-off, high-throughput analysis; The polystyrene and COC plastic of Lunatic consumables are halogen-free; The small sample requirement using Lunatic strips makes Lunatic system the perfect solution for many applications including measuring the concentration and purity of nucleic acid samples (DNA/RNA/oligos), incorporation of fluorescent dyes (pmol/ μ L) and degree of labeling of nucleic acid microarray samples, purified protein analysis, total protein from mixed samples such as cell lysates, full-length IgG and purified His-tagged IgG samples, quantification of fluorescently labeled proteins, API quantification (Active Pharmaceutical Ingredient), plasma QC, standard curve, and full UV/Vis spectral measurements

MICROPLATE DOMINO

OneLab reference: [218.2002]

Valita®Titer assay plate

Standard 96-well microtitre plate; Flat well bottom; Half area well design – utilize the same well spacing as a regular 96-well plate, but contain wells with half the diameter of a typical 96-well plate, enabling miniaturization to lower assay volumes (save on rare and expensive reagents by reducing the amount of reagent needed per well) while retaining ease of pipetting and readability by most standard plate readers; Opaque black walls – reduce/minimize well-to-well crosstalk and background fluorescence during fluorescent assays as well as light scattering; Made from not-treated, medium binding polystyrene that provides a hydrophobic surface capable for binding biomolecules via passive interactions; Each well is coated with FITC-labelled protein used as a specific fluorescent probe for detection of target IgG antibody; Specially produced for the Valita®Titer assay intended for rapid, high-throughput quantification of IgG antibodies or IgG-Fc fusion proteins in liquid samples (e.g. cell culture supernatant or cell culture media) using fluorescence polarization, FP (2.5 mg/L - 100 mg/L of IgG); Achieves a precise QA/QC determination of IgG titer levels for selecting the best cell line during biomanufacturing; Conforms to standard microplate footprint and dimensions – compatible with a wide range of microtitre FP plate readers such as PHERAstar Plus plate reader (BMG LABTECH); Recommended working volume of 25 to 125 µL; Pipetting sample volumes < 5 µL is not recommended; Store at 2-8°C in an upright position; Single use only

NUCLEOBOND XTRA MIDI COLUMN DOMINO

OneLab reference: [218.2122]

MACHEREY-NAGEL, NucleoBond Xtra Midi column

NucleoBond® Xtra Midi column; Used in the NucleoBond® Xtra Midi kit for ultra-fast purification of transfection-grade DNA plasmids (high- and low-copy), cosmids, and very large constructs (P1 constructs, BACs, PACs) ranging from 3 kbp up to 300 kbp; Features a NucleoBond® Xtra silica resin packed between two inert filter elements; The unique silica-based anion-exchange resin consists of hydrophilic, macroporous silica beads functionalized with MAE (methyl-amino-ethanol) that specifically binds to DNA molecules; Silica resin can be used over a wide pH range (pH 2.5–8.5) – stable chromatographic properties; Gravity flow column in Midi format - typical DNA yield of 500 µg; Columns are chemically resistant to organic solvents (e.g. alcohol, chloroform, and phenol) and are suitable for use with buffers containing denaturing agents such as formamide, urea, or common detergents like Triton X-100 or NP-40; A specially designed depth filter is inserted ready-to-use in the column – allows high filter flow rates, simultaneous clearing of bacterial lysate and loading of cleared lysate onto the column (NO time-consuming centrifugation step for lysate clearing); NucleoBond® Xtra column filters allow complete removal of precipitate without clogging and preserve large DNA constructs, i.e. PACs or BACs, from shearing; Typical purity A260/A280 = 1.8–1.95

MICROTUBE DOMINO

OneLab reference: [218.2152]

Eppendorf 1.5 mL protein LoBind® microtube

Eppendorf 1.5 mL microtube; Conical bottom; Protein LoBind® properties - a special, two-component polymer mix creates a hydrophilic surface that ensures optimized recovery rates of valuable samples by significantly reducing sample binding to the surface (low protein binding affinity); Specially designed for use in protein research or with sensitive proteomic assays where protein concentration tends to be very small and sample recovery is vital for assay results; Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; with attached lid - precise lid sealing to minimize evaporation; Ideal for preparation and/or storage of protein, peptide or antibody samples - more protein can be recovered for downstream analyses; Suitable for enzymatic assays - the hydrophilic surface reduces denaturing effects and enzymes remain active; Recommended for collection and storage of viral samples - prevents sample loss during storage; Can be used for storage of cell suspensions

Eppendorf 2 mL protein LoBind® microtube

Eppendorf 2 mL microtube; Round bottom; Protein LoBind® properties - a special, two-component polymer mix creates a hydrophilic surface that ensures optimized recovery rates of valuable samples by significantly reducing sample binding to the surface (low protein binding affinity); Specially designed for use in protein research or with sensitive proteomic assays where protein concentration tends to be very small and sample recovery is vital for assay results; Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; with attached lid - precise lid sealing to minimize evaporation; Ideal for preparation and/or storage of protein, peptide or antibody samples - more protein can be recovered for downstream analyses; Suitable for enzymatic assays - the hydrophilic surface reduces denaturing effects and enzymes remain active; Recommended for collection and storage of viral samples - prevents sample loss during storage; Can be used for storage of cell suspensions

MICROTUBE DOMINO

OneLab reference: [218.2152]

Eppendorf 1.5 mL Safe-Lock tube

Eppendorf 1.5 mL microtube; Eppendorf Quality™; Conical bottom; Features a hinged Safe-Lock lid – prevents accidental lid opening during incubation and storage for highest sample protection and provides precise sealing for minimal evaporation rates during long-term storage; Made of polypropylene (PP) - provides high resistance to chemicals and mechanical stress as well as high tolerance to temperature extremes - ensured functionality from -86°C to 100°C; Manufactured without the use of slip agents, plasticizers and biocides (leachable), substances that negatively affect bioassay results or measurements, thereby eliminating the risk of interference for highest sample integrity; g-Safe® – offers exceptional centrifugation stability, allowing to safely centrifuge without sample loss due to tube breakage, especially when working with hazardous samples; Suitable for routine applications; Features a large frosted lid and surface on the side for easy labelling; Autoclavable when open (121 °C, 20 min)

96-PCR PLATE DOMINO

OneLab reference: [218.2212]

Eppendorf twin.tec® 96-well semi-skirted PCR plate

Eppendorf twin.tec® 96-well PCR plate; Colorless frame; Semi-skirted; One-piece design - combines a polycarbonate (PC) frame and polypropylene (PP) wells for optimum performance; Features an exceptionally solid, robust PC frame for ultimate rigidity and torque resistance; Certified PCR clean; PP clear conical wells with improved well-to-well tolerance; 250 µL maximum well volume when used with cap strips (strips with eight micro-caps, with a flat or domed shape); Extremely thin-walled wells guarantee optimum and consistent heat transfer to the sample; Raised well rims provide effective sealing and reduce the risk of cross-contamination; Ideal for quantitative real-time PCR and standard PCR amplification; Suitable for small volume sample handling; Fits most thermal cycles; The semi-skirted design allows for labelling or barcoding (upon request); OptiTrack® matrix for faster sample identification and fewer pipetting errors; NOTE: North America order no. 951020303

96-PCR PLATE DOMINO

OneLab reference: [218.2212]

FrameStar® break-a-way PCR plate in 96x FrameStrip® adapter

FrameStar® 96-well break-a-way PCR plate; Semi-skirted plate with cut corner A12; Standard profile, clear 0.2 mL conical wells and purple frame; Divisible - vertically scored for easy separation into strips of 8 tubes or part plates (smaller plate sections); Utilizes the FrameStar® two-component technology, which combines the advantages of ultra-smooth, uniform, thin-walled polypropylene (PP) tubes for optimum PCR and real-time qPCR results, and a rigid polycarbonate (PC) frame for superior thermal stability of the plate during the PCR run; The FrameStar® two-component design prevents plate warping (distortion of tube strips) and thermal expansion which helps preserving the integrity of seals even at elevated temperatures, thus minimizing sample evaporation during thermal cycling and improving PCR results; The frame includes end tabs for easy handling and labelling, and alphanumeric grid reference to aid well and sample identification; Raised rims around each tube aid the prevention of cross-contamination between samples; Loaded into a 96-well format, skirted, white PC FrameStrip® adapter (Brooks Life Sciences, p/n 4ti-0370) – a 96-position plate that fits standard profile 8-tube strips or part plates perfectly, allowing for easy and secure handling; The adapter design includes locator pins on the deck to ensure 8-tube strips and part/full plate are always loaded in the correct orientation; The FrameStrip® adapter offers a solution for processing 8-tube strips or smaller plate sections in a plate format with automation platforms while maintaining flexibility for varying throughputs; The FrameStrip® adapter is supplied with a compatible clear polystyrene (PS) lid - provides protection for the strips during handling and shipping; FrameStar® plates are ideal for assay miniaturization due to improved level of seal integrity and minimal evaporation - reaction volumes can be reduced (downscaling) without any loss of assay sensitivity or consistency, leading to cost saving; Compatible with majority of thermal cyclers, real-time detection systems and sequencers; FrameStar® plates guarantee a reliable use on most automation platforms as plate distortion post-PCR is eliminated; Compatible with multichannel pipettes

96-PCR PLATE DOMINO

OneLab reference: [218.2212]

FrameStrip® 8-well PCR tube strip in 96x FrameStrip® adapter

FrameStrip® 8-well PCR tube strip; Standard profile, clear 0.2 mL conical tubes and blue frame; Features a two-component design, combining the advantages of thin-walled polypropylene (PP) tubes for optimum PCR results and a rigid polycarbonate (PC) frame for easy and reliable handling; Ensures efficient heat transfer; The inert surface of tubes exhibits low binding capabilities for nucleic acids, proteins and other molecules; The frame portion, molded in a rigid polymer, provides improved mechanical stability for the strip compared with traditional single piece products; The frame includes end tabs allowing for easy handling and labelling of the strips; Loaded into a 96-well format, skirted, white PC FrameStrip® adapter (Brooks Life Sciences, p/n 4ti-0370) – a 96-position plate that fits up to 12 standard profile 8-tube strips perfectly, allowing for easy and secure handling; The adapter design includes locator pins on the deck to ensure 8-tube strips are always loaded in the correct orientation; The FrameStrip® adapter offers a solution for processing PCR tube strips in a plate format with automation platforms while maintaining flexibility for varying throughputs; The FrameStrip® adapter is supplied with a compatible clear polystyrene (PS) lid - provides protection for the strips during handling and shipping; FrameStrip® 8-well PCR tube strips offer a very flexible solution for PCR set-up with superior sealing (using strips of flat optical caps) and are compatible with the majority of thermal cyclers

MicroAmp™ EnduraPlate™ 0.3 mL optical 96-well reaction plate w/ barcode

MicroAmp™ EnduraPlate™ 0.3 mL optical 96-well reaction plate with barcode; Semi-skirted – provides mechanical strength and a necessary side surface for robotic handling using grippers; Conical well bottom; Working volume of 0.2 mL; Standard well profile – delivers standard reaction speed; Flat deck enabling a universal fit with most thermal cycles and facilitating sealing and handling; Features thin-walled, clear polypropylene (PP) wells – allow for a snug fit to thermal blocks with excellent heat transfer from thermal block to sample for fast, efficient PCR amplification; The use of polypropylene helps minimize DNA, RNA, and enzymes from binding; The rigid polycarbonate frame ensures excellent mechanical stability and flatness during and after thermal cycling (no plate warping); Designed with raised well rims for effective sealing and reduced cross-contamination; Optimized for use with Applied Biosystems® instruments enabling optimal fit and high PCR/qPCR performance; Offers a great degree of durability for use with automation and multi-instrument experiments (e.g., endpoint thermal cycler -> real-time PCR system -> genetic analyzer); Well suited to high-throughput applications and robotic handling; Features easy-to-read, printed black well identification that helps to minimize pipetting mistakes and improves sample preparation productivity; ANSI/SBS compliant construction; Can be stored at room temperature

96-PCR PLATE DOMINO

OneLab reference: [218.2212]

MicroAmp™ 0.2 mL Fast Optical 96-well semi-skirted reaction plate

MicroAmp™ 0.2 mL Fast Optical 96-well reaction plate; Semi-skirted – provides mechanical strength and a necessary side surface for robotic handling using grippers; Conical well bottom; Working volume of 0.1 mL; Low well profile – the reduced well height helps minimize evaporation and enhances thermal conductivity to deliver fast reaction speed; Raised deck required for some thermal cycler lids and instruments, helping to balance lid pressure without the need for adapters; Constructed from a single rigid piece of polypropylene (PP) in a 96-well format – can withstand rapid changes in temperature and helps to minimize absorption of reaction components; Consistent well-to-well thickness – ensures all samples are processed uniformly in all wells; Designed to increase the thermal contact with the Veriti™ 96-Well Fast Thermal Cycler for faster and more uniform heating; Guarantees maximum thermal conductivity for precise thermal cycling; Temperature accuracy and reaction uniformity reduce experimental artefacts, thereby generating reproducible and accurate PCR results; Depending on the size of fragments to amplify, combining the MicroAmp™ microplate with the adequate pre-mixed Fast PCR master mix and the Veriti™ 96-Well Fast Thermal Cycler helps reduce PCR/cycling reaction time for fragment amplification (e.g., 25 min for fragments < 500 bp from genomic backgrounds) or the generation of specific amplicons optimal for high-quality sequencing results (e.g., using AmpliTaq Gold™ Fast PCR Master Mix); Compatible with Applied Biosystems™ PCR thermal cyclers, real-time PCR systems and genetic/DNA analyzers; with engraved/molded alphanumeric labeling for well/sample identification; May be stored at room temperature; without barcode

96-PCR PLATE DOMINO

OneLab reference: [218.2212]

Multiply® 96-well non-skirted PCR plate

Multiply® 96-well PCR plate; Conical well bottom; without skirt/frame; High-profile - full-height, standard wells; High-profile PCR plates are not optimal for low volume reactions because of the potential large dead space separating the heated lid of the thermal cycler and the sample - this increases the risk of condensation on the side wall of the tube, reducing the PCR volume and hindering the efficiency of the reaction; Fits in most thermal cyclers for end-point PCR; Suitable for real time qPCR; Sealing using either transparent flat top push cap strips or adhesive films

96-PCR PLATE DOMINO

OneLab reference: [218.2212]

TempAssure® 0.2 mL 8-tube strip in Vari-Plate™ 96x frame

TempAssure® 0.2 mL PCR 8-tube strip; PP thin wall tubes - ensure rapid and even heat transfer for reliable amplification reactions; Non-autofluorescent material; Features a pull-apart design enabling easy separation of microtubes; Provided with separate optical, flat 8-cap strips for sealing; Individual 8-tube strips are inserted into a Vari-Plate™ 96-well skirted frame (Azenta Life Sciences, p/n 4ti-0757-F) to form a complete or partial plate; The Vari-Plate™ frame is made of white, rigid polycarbonate - reduces thermal expansion and sample evaporation during PCR, leading to improved consistency in PCR results; The Vari-Plate™ frame has a standard microplate footprint - fits a wide variety of thermal/PCR cyclers and is compatible with standard multichannel pipettes

IMPORTANT

When setting up the TempAssure® 0.2 mL 8-tube strip(s) in Vari-Plate™ 96x frame into the 96-PCR Plate Domino, it is recommended to first place the empty frame in the Domino, ensuring it is firmly inserted into the support.

Then, the TempAssure® 0.2 mL 8-tube strip(s) can be individually loaded into any of the 12x column slots of the frame as required and in a clean way (using gloves), making sure they are properly inserted.

SML ROUND BOTTOM TUBE DOMINO

OneLab reference: [218.2242]

VACUETTE® 2 mL virus stabilization tube

VACUETTE® 2 mL virus stabilization tube; 13x100 mm tube size; U-shaped bottom; Made of Polyethylene Terephthalate (PET); The tube is non-evacuated and the tube interior is sterile; Plastic tube with a pre-defined volume of a phosphate buffer saline (PBS) solution at a pH of 7.4 ± 0.2 (without RNase inhibitors) to allow for the storage of the swab specimens at 4°C for up to 72h; Fitted with a unique VACUETTE® safety cap - red cap/white inner ring; Innovative PREMIUM tube and unique screw thread type - features a Safety Twist Cap for maximum handling comfort and safety, ensuring hygienic, easy opening of the tube (no risk of blood splashes and aerosol effect) by a gentle, controlled twist movement (cannot be removed by a simple pull action) and secure transport due to firm hold of cap; Intended for the safe transport and storage of nasopharyngeal and oropharyngeal swab specimens including SARS-CoV-2 (to be used by healthcare professionals for SARS-CoV-2, influenza A and influenza B testing only); The use of PBS (including molecular grade PBS and other similar formulations such as Delbecco's PBS) is recommended by the FDA as an alternative to a universal medium for the stabilization, transport and storage of samples containing viruses (e.g. SARS-CoV-2) when universal transport media (UTM) for viruses is not available; Primary container for swab specimens - ensures sample stabilization from the point of collection to arrival at a testing laboratory where viral RNA can be extracted and detected using nucleic acid amplification techniques; with paper label; Store tubes at 4-25°C; NOTE: Avoid exposure to direct sunlight. Exceeding the maximum recommended storage temperature may lead to impairment of the tube quality (i.e. drying out of liquid additives, coloring, etc.); For in-vitro diagnostic use; The tube is single use and can be used on a single patient only; Keep the sterile tube closed until use; INSTRUCTIONS FOR USE: Remove the cap from the VACUETTE® virus stabilization tube and immediately insert the swab containing the specimen into the tube (the length of the inserted swab should not exceed 90 mm) before securely closing the tube with the PREMIUM screw cap

DEEPWELL MICROPLATE DOMINO

OneLab reference: [218.2301]

24x 4 mL aluminum multi-well reaction block

24-well 4 mL aluminum reaction block for parallel synthesis (p/n 24015) - includes: base plate, cover, PFA film, 2 rubber mats, and screws; Vials not included - to use with Advantage™ 4 mL (1 DRAM) clear glass screw vials, 13 mm mouth, 15x45 mm size (p/n 31531-CASE), compatible with Shimadzu and Waters WISP 48-position autosamplers; Within the reaction block, the silicone rubber mats/PFA film sealing strategy ensures reduced solvent loss even with prolonged heating (< 5% solvent loss); Can be used on magnetic tumble stirrers and hotplate stirrers; Designed specifically for high-throughput reaction screening (HTS) applications - conduct screening of reaction conditions; The standard ANSI/SLAS format block allows for use with automation/robotic platforms

DEEPWELL MICROPLATE DOMINO

OneLab reference: [218.2301]

96-well photoredox block assembly

Standard 96-well photoredox block assembly (p/n 96973) - includes vial rack, bottom & top covers, PFA films, rubber mats, and screws; Vials not included - to use with 1 mL clear glass shell vials, 8x30 mm size (p/n 84001-CASE) in stackable tray (p/n 884001); Within the reaction block, silicone rubber mats provide compression sealing (3 mats/plate - two on top and one on the bottom of the plate), while chemically compatible Teflon® PFA films provide a seal on top and a protection for vials on the bottom (prevent glass reaction vials from sticking to the silicone mat during heating); This sealing strategy ensures reduced solvent loss even with prolonged heating (< 5% solvent loss); Can be used on magnetic tumble stirrers and hotplate stirrers; Designed specifically for high-throughput reaction screening (HTS) applications - conduct screening of reaction conditions; Useful in medicinal chemistry - photoredox catalysis to perform direct C-H functionalization of synthetic intermediates and drug leads; The standard ANSI/SLAS format block allows for use with automation/robotic platforms

DEEPWELL MICROPLATE DOMINO

OneLab reference: [218.2301]

Abgene™ 0.8 mL 96-deep well storage plate

Abgene™ 0.8 mL 96-deep well storage plate; Round well shape; V-conical well bottom – improves sample recovery and decreases dead volume; Manufactured using high-quality, medical-grade virgin polypropylene (PP) resin for superior quality and performance of the storage plate – provides excellent chemical resistance to solvents such as DMSO, EtOH, and IPA, minimizes the risk of extractables and leachables, and finally ensures high temperature stability (-80°C to + 121°C); Low binding PP maximizes recovery of valuable samples; Clean room manufactured from molding to final packaging to ensure repeatability and the absence of contamination; Abgene storage plate applications comprise compound storage, High Throughput Screening (HTS), genomics, and cell culture; Certified DNase, RNase, and human DNA free for demanding applications such as molecular biology (nucleic acid manipulation) or compound storage; Offers storage security for assays, compound libraries or storing samples for either intermediate or long-term use; Allows increased well volume for maximum sample stored per plate; Designed to ANSI standards achieving compatibility with a variety of automated liquid handling applications for high throughput workflows; Multiple sealing solutions are available including adhesive or heat seals (0.8 mL max well volume), cap strips (0.7 mL max well volume), and sealing mats (0.55 mL max well volume) along with sealing equipment (e.g. ALPS30 manual heat sealer) specially designed to deliver efficient, secure sealing and minimize evaporation and contamination of samples for instance when performing PCR or during sample storage; For research use only, not for use in diagnostic procedures

BRAND® 1.1 mL 96-deep well U-bottom plate

BRAND® 1.1 mL 96-deep well plate; Round wells with U-shaped (round) bottom – ensure optimal sample mixing and collection; Made from high-purity and transparency polypropylene (PP) resin which enables good visual inspection and provides good chemical resistance to commonly used solvents such as DMSO, phenol, chloroform; The raised edges of the well allow for secure closure and therefore a better protection from contamination; Features alphanumeric coding and cut-away corner to simplify sample identification and plate orientation, respectively; The compact, standard ANSI/SLAS format allows for automated processing; Suitable for use with multichannel pipettes and automated liquid handling systems; Optimal sealing options (i.e., matching sealing mats, self-adhesive sealing films) are available to ensure secure storage; Sealing mats are ideal for short-term storage and reliably protect samples against contamination and evaporation – the maximum filling volume with compatible sealing/cover mat (BRAND, P/N 701360) is 0.99 mL; Space-saving, stackable format for easy storage

DEEPWELL MICROPLATE DOMINO

OneLab reference: [218.2301]

Eppendorf 1 mL 96-deep well protein LoBind® plate, yellow frame

Eppendorf 1 mL 96-deep well plate; Yellow frame border; Round colorless wells with round bottom; Protein LoBind® properties - a special, two-component polymer mix creates a hydrophilic surface that ensures optimized recovery rates of valuable samples by significantly reducing sample binding to the surface (low protein binding affinity); Specially designed for use in protein research or with sensitive proteomic assays where protein concentration tends to be very small and sample recovery is vital for assay results; Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; RecoverMax® well design - optimized well geometry for minimal remaining/dead volume and excellent mixing properties; Raised well rims and a smooth surface ensure reliable sealing; Ideal for preparation and/or storage of protein, peptide or antibody samples - more protein can be recovered for downstream analyses; Suitable for enzymatic assays - the hydrophilic surface reduces denaturing effects and enzymes remain active; Recommended for collection and storage of viral samples - prevents sample loss during storage; Can be used for storage of cell suspension; High-contrast unique OptiTrack® matrix - up to 30 % faster sample identification and fewer pipetting errors

Eppendorf 2 mL 96-square deep well plate, yellow frame

Eppendorf 2 mL 96-deep well plate; Yellow frame border; Square clear wells with a round and smooth design of internal corners - prevent capillary effects (wicking) and reduce the risk of cross-contamination; Conical well bottom; Made of high-quality polypropylene (PP) - provides high resistance to chemicals and mechanical stress, and high tolerance to temperature extremes; PCR clean; Features a unique and easy-to-read OptiTrack® matrix, a laser-applied, high-contrast alphanumeric labeling of wells - allows rapid identification of samples and helps reducing pipetting errors; RecoverMax® well geometry - rounded edges in combination with optimized well bottom design maximize sample recovery and support excellent mixing properties; Ensures minimal residual/dead volume especially in automated applications and high uniformity from well to well, thereby achieving consistent and reliable application performance; Features raised well edges and smooth surface for reliable sealing including heat sealing; High g-Safe® centrifugation stability for faster processing and better sample quality; Manufactures without slip agents, plasticizers or biocides (leachables), substances that negatively affect bioassays results, thus eliminating the risk of interference for highest sample integrity; Suitable for various manual and automated applications such as sample storage at -86°C, sample preparation, DNA denaturation at 100°C, high throughput nucleic acid isolation, storage of genomic and oligonucleotide libraries, plasmid purification, and creation of dilution series; Comply with the SBS/ANSI standard dimensions; Enables seamless integration in automated systems; Easily stackable and sealable

MagNA Pure 96 processing cartridge

MagNA Pure 96 processing cartridge; 96-deep well plate with round well bottom; Used for sample input and all processing steps in the MagNA Pure 96 instrument, a high throughput robotic workstation for fully automated purification of nucleic acids using magnetic glass particle technology; Features elevated well walls to minimize the potential risk of cross-contamination; Manufactured from material that is inert to chemical leaching at low and elevated temperatures, preventing potential interference with downstream applications; Nuclease-free MagNA Pure 96 disposable; For *in vitro* diagnostic use

Manufacturer:
Roche

DEEPWELL MICROPLATE DOMINO

OneLab reference: [218.2301]

SAFE® 2D/1D XLX 2000 external thread tube in 48x rack

SAFE® 2D coded, 2000 µL X-large storage tube with external thread (XLX 2000) and 1D side barcode loaded into a 48x ANSI/SBS standard footprint rack with a slide lock lid (LVL technologies, p/n RCK-XLX48SLP-L); Tubes feature a white on black, permanent data matrix code laser-etched on their base (2D bottom code) - highly resistant to chemical and thermal influences, easily legible thanks to excellent contrast, enabling fast and reliable identification of samples; An 1D side barcode offers additional security and traceability; Closure with external thread - minimizes risks of cross-contamination comparing to solutions with internal thread; Pre-capped with blue screw caps characterized by a special, patented two-phase TPE compression, which guarantees a tight seal against liquid leakage (sealing of the liquid phase) and minimizes the ingress and leakage of potential gases (sealing of vapour phase), thereby enabling safe, long-term storage; SAFE® 2D Tubes are made of low binding pure polypropylene ensuring reaction-free sample storage; Tubes have polished surface for excellent transparency and visual control of content volume; SAFE® 2D Tubes display an outer flat bottom for good legibility and an internal round (U-shaped) bottom for low dead volume; Tubes have an enlarged wall thickness for greater physical stability during the freezing process or in case of repeated freezing cycles (thermal resistance); The dimensional stability or the stable position of tubes in rack is crucial for easy picking; The 48 SBS rack is made of robust polypropylene and is extremely stable due to its geometric shape; The rack is labelled with a 1D code on its narrow side and a 2D orientated code on the bottom; The rack/tube system is stackable and compatible with automated systems (e.g; storage, liquid handling); SAFE® 2D Tubes and racks are suitable for storage at temperatures as low as -196°C in the vapour phase liquid nitrogen; SAFE® 2D Tubes are used for the storage and logistics of valuable samples in various applications including biobanking, transfusion medicine, compound management, kit manufacturing (e.g. oligos and other synthetic chemicals) and forensics; Sterilization comes as an added option and is recommended in forensics and for the storage of cells

0.5-0.6ML MICROTUBE DOMINO

OneLab reference: [218.2331]

Eppendorf 0.5 mL DNA LoBind® microtube

Eppendorf 0.5 mL microtube; Conical bottom; DNA LoBind® properties - a combination of special manufacturing technologies and selected polypropylene batches ensures optimized recovery rates of nucleic acids by significantly reducing sample-to-surface binding (low DNA binding affinity, nearly 100% recovery of DNA/RNA molecules); Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; Exhibit a high centrifugation stability and chemical resistance; with attached lid - precise sealing for minimal evaporation; Ideal for preparation and long-term storage of nucleic acids samples; Suitable for various applications including forensic trace analysis, preparation of dilution series in quantitative qPCR, preparation of master mixes for PCR reactions, restriction analysis, DNA-microarray hybridization, sample preparation for NGS, and creation of genomic or oligonucleotide libraries

Manufacturer:
Eppendorf

0.5-0.6ML MICROTUBE DOMINO

OneLab reference: [218.2331]

Eppendorf 0.5 mL protein LoBind® microtube

Eppendorf 0.5 mL microtube; Conical bottom; Protein LoBind® properties - a special, two-component polymer mix creates a hydrophilic surface that ensures optimized recovery rates of valuable samples by significantly reducing sample binding to the surface (low protein binding affinity); Specially designed for use in protein research or with sensitive proteomic assays where protein concentration tends to be very small and sample recovery is vital for assay results; Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; with attached lid - precise lid sealing to minimize evaporation; Ideal for preparation and/or storage of protein, peptide or antibody samples - more protein can be recovered for downstream analyses; Suitable for enzymatic assays - the hydrophilic surface reduces denaturing effects and enzymes remain active; Recommended for collection and storage of viral samples - prevents sample loss during storage; Can be used for storage of cell suspensions

96-PCR PLATE COOLED DOMINO

OneLab reference: [218.2481]

Eppendorf twin.tec® 96-well skirted LoBind® PCR plate

Eppendorf twin.tec® 96-well PCR plate; Green frame; Fully skirted; One-piece design – combines a polycarbonate (PC) frame and polypropylene (PP) wells for optimum performance; Features an exceptionally solid, robust PC frame for ultimate rigidity and torque resistance; Certified PCR clean; PP clear conical wells with DNA LoBind® properties – a combination of special manufacturing technologies and selected polypropylene batches ensures maximum recovery rates of nucleic acids by significantly reducing their adsorption to the wall of the wells (low DNA binding affinity, nearly 100% recovery of DNA/RNA molecules); Free of surface coatings, thereby eliminating the risk of sample contamination; The low profile design enables low volume PCR; 150 µL maximum well volume when used with cap strips (strips with eight microcaps, with a flat or domed shape); Extremely thin-walled wells guarantee optimum and consistent heat transfer to the sample; Raised well rims provide effective sealing and reduce the risk of cross-contamination; Ideal for quantitative real-time PCR with low sample concentration and PCR amplification with low template concentration; Suitable for low volume PCR/qPCR reactions and NGS DNA library preparation; Specially designed to reduce the loss of target molecules and maximize yields in PCR and other molecular assays for better sensitivity and improved assay results; Compatible with automated systems; Skirted design allows for optimal use with automation and for labelling or barcoding (upon request); Stackable; OptiTrack® matrix for faster sample identification and fewer pipetting errors

50ML TUBE COOLED DOMINO

OneLab reference: [218.2541]

Corning® 50 mL conical centrifuge tube

Corning® 50 mL centrifuge tube; Conical bottom; Made of clear polypropylene – provides excellent chemical resistance and mechanical strength; Threaded top; Supplied with HDPE plug seal cap featuring a contoured plug for a tight, secure seal; Well-suited for most disposable centrifuge procedures; Can be used in diagnostics; Ideal working temperature range 0°C to 40°C – suitability for usage outside this range (e.g., frozen storage) depends on both the solution and actual conditions which need to be tested; Displays black printed, accurate graduations and a large white marking spot; Disposable

50ML TUBE COOLED DOMINO

OneLab reference: [218.2541]

Nunc™ 50 mL conical centrifuge tube

Nunc™ 50 mL centrifuge tube; Conical bottom for maximum sample recovery; Made from high-purity polypropylene (PP); The inner surface is biologically inert; Supplied with a plug sealed, grooved screw cap for user-friendly opening/closing of the tube; Guaranteed leakproof to help protect samples and reagents from leaking out; Chemically-compatible with the most commonly used reagents; Offers a higher RCF rating (up to 17,000 xg) when fully supported by conical rotor cavity or conical adaptor, which enables a greater range of applications from low speed to superspeed centrifugation; Considered as a convenient and safe alternative to glass without sacrificing accuracy; Designed for functionality, flexibility, and ease of use; Features graduations and a large writing area for labeling; Disposable

16X90MM GLASS TUBE DOMINO

OneLab reference: [218.2781]

16x100mm collection tube, virus preservation medium

Labeled, skirted (self-standing), 16x100 mm sample collection and storage tube with internal round bottom filled with virus preservation medium; Features a PP screw cap; Convenient for collection and transportation of viruses such as Coronavirus, virus of flu, bird flu, hand-foot and mouth disease, measles, etc, as well as Chlamydia, Mycoplasma and Ureaplasma specimens; Withstands high temperature variations without deformation (121°C, 15min) or embrittlement (-196°C); Enables secure processing by centrifugation and shaking; Leakage proof; Contains 3 mL of preservation medium specially formulated to ensure efficient storage and transport of viral specimens, which greatly improves the positive rate of virus culture and isolation; Glass beads inside the tube facilitate elution, thereby releasing more viruses into the preservation solution; Used with sterile, nylon-flocked swab for efficient sample collection and complete release of samples into the preservation solution

0.2ML MICROTUBE RACK DOMINO BUNDLE

Thermo Scientific™ 0.2 mL PCR microtube, racked

Thermo Scientific™ 0.2 mL PCR individual tube; Conical bottom; Features an integral «snap shut» flat cap; Thin-wall design, Loaded into a 0.2 mL microtube 4x6 rack specifically developed by Waters to accommodate up to 24 tubes; Suitable for 0.2 mL thermal cycler blocks; Offers 0.25 mL maximum volume when closed; Used for PCR applications

IMPORTANT

The 0.2mL Microtube Rack Domino bundle consists of two components:

[218.4611]
Collection Labware
Rack Domino

0.2 mL microtube
4x6 rack
specifically
manufactured by
Waters to support
the Thermo
Scientific™ 0.2 mL
PCR microtubes

Except for the Collection Labware Rack Domino, the 0.2 mL microtube 4x6 rack cannot be ordered individually. The latter is only supplied with the 0.2mL microtube Rack Domino bundle. To order the bundle, please use the ordering product number 186010303 associated.

100ML BOTTLE MAGNETIC STIRRER DOMINO

OneLab reference: [218.2871]

DURAN® 100 mL clear glass laboratory bottle

DURAN® 100 mL original laboratory bottle; with GL 45 thread; Transparent for easy content and volume checking; Very high chemical resistance and near inert behavior - no interfering ion exchange; High temperature and thermal shock resistance - suitable for autoclaving; Uniform wall thickness; Very steady due to large base; Supplied with liner-less, one-piece PP screw cap (integral lip seal) and PP pouring ring - for tight sealing and drip-free pouring, ensuring clean, safe working; Features easy-to-read, permanent graduations and large labeling field for easy marking; Ideal for storage, sample preparation, transport, and autoclaving media; DURAN® is a neutral glass of high hydrolytic resistance (Glass Type 1) - well suited for applications in the pharmaceutical and food industries; DURAN® laboratory bottles should be heated gradually when using an electronic heating plate or water bath; NOT suitable for use under pressure or in a vacuum

IMPORTANT

The 100mL Bottle Stirrer Domino was developed for use with the V&P Scientific Multi Stirrus™ system, a rotary magnetic tumble stirrer (V&P Scientific, Inc, p/n VP 710D3 - not provided, to be purchased separately). The Multi Stirrus™ is not connected to OneLab and therefore, is controlled manually by the user.

Agilent 2 mL 12x32mm screw-top vial in 54x vial plate

Agilent certified 2 mL autosampler screw-top vial; Flat bottom; Made of clear borosilicate glass; 12x32 mm vial size; Wide opening with write-on spot; 12 mm cap size; Loaded into an Agilent vial plate (Agilent Technologies, p/n G2255-68700) serving as an autosampler tray that accommodates for up to 54x vials - for use with Agilent well plate autosamplers G1367A, G1367B, G1367C, G1367D, G1367E, G2258A, and G4226A; The vial plate is compatible with a variety of Agilent LC systems including the 1100 LC system, 1200 LC system, 1260 Infinity MC system, and 1290 Infinity LC System; Vials are suitable for GC and LC applications and compatible with instruments from various manufacturers including Agilent, Thermo, Perkin Elmer, Varian/Bruker, and Shimadzu

Azenta 0.9 mL external thread dual-coded tube in 96x rack

Azenta 0.9 mL external thread, dual-coded tube; Loaded in a 96-format SBS rack (high-base rack) with a linear barcode on the side to be read more easily (Azenta Life Sciences, p/n 66-61002); Sealable with a PP, automation-friendly screw cap (a deforming compression, non-silicone seal preventing the cap from being over-tightened) that provides flexibility to use tubes across a range of automated tube handling platforms – features a double-start thread for a reliable, secure, and consistent screw cap seal as well as facilitating automation; Leak tested to ensure sample security; The external thread improves sample safety (reduces chances of cross-contamination) while maximizing sample storage volume (provides higher working volume than internally threaded tubes); Features a high-contrast, permanently laser-etched 2D code and a human-readable number on the tube base, ensuring a permanent link between sample and data; 2D code is reliably readable without removing tubes from rack, thereby enabling a more streamlined workflow; Guarantees the highest level of sample security, management, and tracking in high-density storage applications; Suitable for long-term, secure storage of samples in biobanks, compound libraries, and a broad range of biological and chemical materials, including cryogenic storage to -196°C in vapor phase liquid nitrogen (Not for use in liquid phase nitrogen); Compatible with low throughput manual, semi-automated or fully automated workflows on integrated platforms; Supplied capped and racked

Eppendorf 0.5 mL 96-deep well protein LoBind® plate, yellow frame

Eppendorf 0.5 mL 96-deep well plate; Yellow frame border; Round colorless wells with round bottom; Protein LoBind® properties - a special, two-component polymer mix creates a hydrophilic surface that ensures optimized recovery rates of valuable samples by significantly reducing sample binding to the surface (low protein binding affinity); Specially designed for use in protein research or with sensitive proteomic assays where protein concentration tends to be very small and sample recovery is vital for assay results; Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; RecoverMax® well design - optimized well geometry for minimal remaining/dead volume and excellent mixing properties; Raised well rims and a smooth surface ensure reliable sealing; Ideal for preparation and/or storage of protein, peptide or antibody samples - more protein can be recovered for downstream analyses; Suitable for enzymatic assays - the hydrophilic surface reduces denaturing effects and enzymes remain active; Recommended for collection and storage of viral samples - prevents sample loss during storage; Can be used for storage of cell suspension; High-contrast unique OptiTrack® matrix - up to 30 % faster sample identification and fewer pipetting errors

Eppendorf 2 mL 96-square deep well plate, yellow frame

Eppendorf 2 mL 96-deep well plate; Yellow frame border; Square clear wells with a round and smooth design of internal corners - prevent capillary effects (wicking) and reduce the risk of cross-contamination; Conical well bottom; Made of high-quality polypropylene (PP) - provides high resistance to chemicals and mechanical stress, and high tolerance to temperature extremes; PCR clean; Features a unique and easy-to-read OptiTrack® matrix, a laser-applied, high-contrast alphanumeric labeling of wells - allows rapid identification of samples and helps reducing pipetting errors; RecoverMax® well geometry - rounded edges in combination with optimized well bottom design maximize sample recovery and support excellent mixing properties; Ensures minimal residual/dead volume especially in automated applications and high uniformity from well to well, thereby achieving consistent and reliable application performance; Features raised well edges and smooth surface for reliable sealing including heat sealing; High g-Safe® centrifugation stability for faster processing and better sample quality; Manufactures without slip agents, plasticizers or biocides (leachables), substances that negatively affect bioassays results, thus eliminating the risk of interference for highest sample integrity; Suitable for various manual and automated applications such as sample storage at -86°C, sample preparation, DNA denaturation at 100°C, high throughput nucleic acid isolation, storage of genomic and oligonucleotide libraries, plasmid purification, and creation of dilution series; Comply with the SBS/ANSI standard dimensions; Enables seamless integration in automated systems; Easily stackable and sealable

STORAGE PLATE DOMINO

OneLab reference: [218.2901]

Matrix™ 0.5 mL V-Bottom screw-top tube in 96x rack

Matrix™ 0.5 mL storage tube; Conical well bottom shape for maximal sample recovery; Medical grade PP screw-top cap with silicone O-ring/gasket - ensures sample preservation and improves seal integrity; Features a permanent, unique 2D barcode laser-etched onto the base of each tube - securely identify and track samples; Compatible for use with common aqueous solutions (e.g. glycerol, PEG, Acetonitrile, TE, DEPC) as well as alcohols (e.g. ethanol, methanol) and DMSO; Loaded into a barcoded, stackable, ANSI/SLAS microplate footprint, 96-format latch rack (Thermo Scientific, p/n 4900) - maximizes storage space while maintaining traceability and readability, also compatible with multichannel pipettes and automated liquid handling devices; The rack is made of polycarbonate with acetal latches and provides permanent 2D, linear and human-readable codes on its three sides; Ideal solution for secure long-term storage of precious samples (e.g. blood components, DNA and bacteria) at low temperatures including vapor-phase liquid nitrogen; Access to individualized samples on the rack eliminate multiple freeze/thaw cycles

Waters GlycoWorks™ 600 µL tubes in 96x plate

GlycoWorks™ 600 µL tubes; Round top; Conical bottom; Provided in a pull-apart 8-tube strip format within the GlycoWorks Sample Collection Module - Strips of 8 tubes are convenient for using an 8-channel pipette to process samples for higher throughput and efficiency (separate tubes as needed for the workflow and throughput); Used in the GlycoWorks RapiFluor-MS N-Glycan kit (Waters) for collecting SPE eluate (RapiFluor-MS labeled glycans) during the HILIC SPE clean-up step and subsequently diluting samples with GlycoWorks Sample Diluent-DMF/ACN prior to analysis; Recommended for injecting samples for LC-MS analysis; Loaded into a 96-well sample collection plate (Waters, p/n 186002481) to serve as direct collection/preparation inserts; The collection plate features 800 µL round wells with conical bottom, is SBS/ANSI compliant, and is well fitted for the vacuum manifold and 600 µL tubes; Strips of 8 pre-slit Silicone/PTFE cap mats are provided for capping the 8-strip format 600 µL inserts and are recommended for direct injection of samples after labeling and SPE - cut smaller lengths of the 8-strip mat as needed for the experiment

2ML HPLC VIAL RACK DOMINO

OneLab reference: [218.3001]

Agilent 2 mL 12x32mm crimp-top vial in Genevac 48x holder

Agilent certified 2 mL autosampler crimp-top vial; Flat bottom; Made of clear borosilicate glass; 12x32 mm vial size; without write-on spot; 11 mm cap size; Loaded into a Genevac 48-format aluminium vial holder (Genevac Ltd. - SP Scientific, p/n 10-5024) – originally intended for use in Genevac evaporators; The low-weight Genevac vial holder features a high thermal conductivity ensuring optimal heat transfer; The holder is hard anodised (water sealed) for protection against common organic solvents, including acids (e.g. TFA, HCl, Thionyl chloride); Vials are suitable for GC and LC applications and compatible with instruments from various manufacturers including Agilent, Thermo, Perkin Elmer, Varian/Bruker, and Shimadzu

2ML HPLC VIAL RACK DOMINO

OneLab reference: [218.3001]

Deactivated 2 mL screw-neck amber glass vial

Deactivated 2 mL autosampler vial; 12x32 mm size; Flat bottom; Screw neck closure – supplied with a universal screw cap; Not certified; Made of amber glass – protects sensitive samples from UV light while preventing deterioration; Loaded into a vial holder with a capacity for 48 vials (Waters, p/n 700011047) – the 48x holder is compatible with ACQUITY UPLC® sample managers; Ideal for sample preparation; Offers good compositional stability – can withstand chemical and mechanical forces within a defined range making it safe to deposit sensitive analytes, samples, and solutions while awaiting the analysis results; Shows excellent chemical inertness – ensures that there is no interference with the analytes; The tight structure of the vial ensures a secure fit to the analytical equipment; The 12x32 mm screw neck cap with PTFE/silicone septum (Waters; p/n 186000274) achieves excellent sealing performance and is recommended for multiple injections and sample storage

2ML HPLC VIAL RACK DOMINO

OneLab reference: [218.3001]

Sarstedt, 1.2 mL QuickSeal screw-cap cryotube in Waters 48x holder

1.2 mL ultra-transparent cryotube loaded into a vial holder with a capacity for 48 vials (Waters, p/n 700011047); Features a secure, external thread to reduce the risk of contamination; The optimized internal contour of the tube bottom facilitates residue-free sampling; Uses a Quickseal sealing mechanism that guarantees ergonomic and secure opening and closing of the HDPE screw cap with just one turn; The special skirted base is a free-standing design that enables convenient handling in most common stands or racks; Cryo performance tested for vial preservation and the vessel is certified for protection of cell materials and their components at temperatures as low as -196°C – storing in the nitrogen gas phase (< -130°C) is entirely sufficient for successful cryopreservation; Non-mutagenic and non-cytotoxic; IVD conformity confirmed; supplied with cap assembled, with white print and graduation

24-WELL PHOTOREDOX BLOCK DOMINO

OneLab reference: [218.3331]

24-well photoredox block assembly

Standard 24-well photoredox block assembly (p/n 24253) - includes vial rack, bottom & top covers, PFA films, rubber mats, and screws; Vials not included - to use with 1 mL clear glass shell vials, 8x30 mm size (p/n 84001-CASE); Within the reaction block, silicone rubber mats provide compression sealing (3 mats/plate - two on top and one on the bottom of the plate), while chemically compatible Teflon® PFA films provide a seal on top and a protection for vials on the bottom (prevent glass reaction vials from sticking to the silicone mat during heating); This sealing strategy ensures reduced solvent loss even with prolonged heating (< 5% solvent loss); Can be used on magnetic tumble stirrers and hotplate stirrers; Designed specifically for high-throughput reaction screening (HTS) applications - conduct screening of reaction conditions; Useful in medicinal chemistry - photoredox catalysis to perform direct C-H functionalization of synthetic intermediates and drug leads; The standard ANSI/SLAS format block allows for use with automation/robotic platforms

WES AND JESS PLATE DOMINO

OneLab reference: [218.3361]

ProteinSimple, Wes/Jess plate

Specially-designed assay plate for use with Wes and Jess systems to run Simple Western assays - Separation and analysis of proteins by size from 2-440 kDa by capillary-based immunoassay (chemiluminescence or fluorescence), generating quantitative, size-based data including total protein; Plate is pre-filled with separation matrix, stacking matrix, split running buffer and matrix removal buffer; Samples (e.g. protein lysate) and reagents (including ladder, antibodies, substrate mix, wash buffer) are added to the microplate during preparation step - analysis requires only 3 μ L of sample per capillary; The evaporation foil is peeled off after centrifugation (at 2500 r.p.m) when placing the plate in the device; Allows analysis of up to 25 samples in 3 hours - throughput flexibility thanks to the possibility of using either 13- or 25-Capillary Cartridges; All assays steps from protein separation, immuno-probing, detection, and analysis are fully automated; Sensitivity ranges between ng and pg levels; Disposable; NOTE: Wes/Jess plate, part # PS-PP03, covers molecular weight range from 12-230 kDa

13ML TUBE DOMINO

OneLab reference: [218.3391]

16x100mm collection tube, COPAN UTM® medium

Individual, labelled, skirted (self-standing), 16x100 mm screw-cap plastic tube with distinctive internal conical shape filled with 3 mL UTM® medium; The product is referred as UTM® 330C; COPAN UTM® for Universal Transport Medium System, is an FDA cleared collection and transport system intended for collection, transport, maintenance and long-term freeze storage of clinical specimens containing viruses (including COVID-19), chlamydia, mycoplasma or ureaplasma organisms, from the collection site to the testing laboratory; UTM-RT® is room temperature stable - maintains the viability of organisms for up to 48 hours at room or refrigerated temperature (2-25°C) and does not require refrigeration storage prior to collection; The UTM-RT® system consists of a Hanks' Balanced Salt Solution (HBSS) enriched with proteins and sugars, a buffer solution to maintain a neutral pH (pH 7.3 ± 0,2) and a phenol red pH indicator that provides a visual gauge of the medium integrity throughout the storage and life of the product; The UTM-RT® formulation includes antibiotics and antimycotics to inhibit bacterial and fungal growth, maintain cellular integrity, and encourage preservation of viruses, chlamydia, mycoplasma and ureaplasma; The medium test tube contains three glass beads that facilitate the mixing and dispersion of patient sample material and release of virus particles during vortexing; The cost efficient large 3 mL media fill volume allows for multiple tests on the same specimen; The skirted test tube with internal conical bottom enable easy centrifugation of samples and allows the tubes to stand upright on the laboratory bench; The plastic tube is safe and shatterproof; UTM® has been used successfully for rapid antigen testing, DFA (Direct Fluorescent Antibody), viral culture and for molecular-based assays; UTM-RT® can be processed using standard clinical laboratory operating procedures for viral, chlamydial, mycoplasma and ureaplasma culture; The medium test tube must be stored in its original packaging at a temperature between 2 and 25°C until the time of use (do not overheat or freeze prior to use!); The UTM-RT® System is ready for use and requires no further preparation; Swab not included, Bulk packaged; Single-use device for professional in vitro diagnostic use; NOTE: After collection, the specimen should be stored at 2-25°C and processed within 48 hours. If delivery and/or the processing is delayed, over 48 hours, specimens should be transported in dry ice and once in the laboratory, frozen at -70°C or colder

BRAND® 1.2ML MICROTUBE RACK DOMINO

OneLab reference: [218.3421]

BRAND® 1.2 mL 8-strip tubes in 96x rack

BRAND® strips of 8x 1.2 mL tubes with round bottom in standard 96-microplate format tube rack (BRAND, p/n 781540); Rack and tubes are made of polypropylene - Autoclavable PP parts, except PE caps if used; Ideal for sampling and for biological tests, such as cell uptake studies, radioimmunoassay (RIA) and enzyme immunoassay (EIA); Can be used for storing and freezing down samples to -80°C, as well as for transporting reagents and samples; Suitable for working with multichannel pipettes; PE 8-cap strips can be purchased separately

NALGENE™ 15ML BOTTLE DOMINO

OneLab reference: [218.3451]

Nalgene™ 15 mL HDPE diagnostic bottle

Nalgene™ 15 mL HDPE diagnostic bottle; 20-415 mm thread finish; With linerless PP screw cap; Durable, uniform wall - resistance to splitting or puncturing; Leakproof design; Ideal for small volume packing and storage applications; Useful for test kits

Manufacturer:
Nalgene

Part number:
342002-9050

NALGENE™ 60ML BOTTLE DOMINO

OneLab reference: [218.3481]

Nalgene™ 60 mL narrow-mouth HDPE bottle

Nalgene™ 60 mL round HDPE packaging bottle; Narrow-mouth - for easy pouring; 20-415 mm thread finish; With linerless PP screw cap; Durable and leakproof design; Excellent chemical resistance; Minimal biological and particulate contamination - extremely low content of metals; Used to contain high-value reagents, intermediates, products in solution, or critical components in sensitive assays; Ideal for containing reagents that are sensitive to contamination from metals

Manufacturer:

Nalgene

TILTED MICROPLATE DOMINO

OneLab reference: [218.3571]

CELLSTAR® 24-well cell culture plate

CELLSTAR® 24-well cell culture multiwell plate; Flat well bottom; Chimney well design; Each well has a flattened, raised ring to reduce cross contamination; Physical surface treatment (for adherent cell cultures) - Improves cell adhesion and promotes cell growth; Growth area is about 1.9 cm² per well; Medium working volume per well is between 0.5 ml - 1.5 ml; Single-position PS lid with condensation rings - enables gas exchange with the lowest possible evaporation and prevents cross-contamination; Features high-clarity plastic with low autofluorescence; Compatible with common lab instruments and automated systems; For single use only

Manufacturer:
Greiner Bio-One

Part number:
662160

TILTED MICROPLATE DOMINO

OneLab reference: [218.3571]

Corning® CellBIND® 360 µL 96-well clear bottom black microplate

Corning® CellBIND® 360 µL 96-well microplate; Features wells with black walls and a clear flat bottom; CellBIND® surface is a cell culture treatment that increases surface wettability (more hydrophilic) and stability for more even and consistent cell attachment; CellBIND® enhances cell attachment under challenging conditions, such as reduced serum or serum-free medium, resulting in higher cell growth and yields; CellBIND® eliminates the need for low-stability biological coatings for cell attachment and enables better cell recovery of primary cell isolates; Cell growth area of 0.32 cm²; Recommended medium volume of 100 - 200 µL per well; Wells with black walls guarantee lower background in fluorescent assays and reduce cross-talk; Supplied with a non-reversible, low-evaporation lid with condensation rings to reduce contamination; Individual alphanumeric codes allow easy well identification; CellBIND® surface requires no refrigeration/storage or special handling and is stable at room temperature

Manufacturer:
Corning Inc.
Part number:
3340

TILTED MICROPLATE DOMINO

OneLab reference: [218.3571]

Falcon® 6-well cell culture plate, tilted wells

Falcon® 6-well cell culture plate; Round wells with flat bottom; Standard tissue culture-treated surface - a consistent tissue culture surface is produced using reliable and highly-controlled vacuum-gas plasma treatment (well-to-well and plate-to-plate consistency); Surface treatment incorporates negatively charged functional groups that create a hydrophilic surface for cell attachment; Ensures reduced (cross-) contamination risk, low evaporation and minimal edge effects thanks to the unique labyrinth air passage system of the one-way lid, the individual condensation rings above each well, and the deep-well design; Suitable for cell/tissue culture using aqueous reagents; Cell growth area is about 9.6 cm²; Trypsinization - Working volume is 0.2-0.3 mL of Trypsin per well; Convenient, peel-open, medical-style packaging enabling aseptic product conservation; Stackable with plates with different well-sizes for efficient management of incubator space

Manufacturer:
Corning Inc.

Part number:
353224

TILTED MICROPLATE DOMINO

OneLab reference: [218.3571]

ibidi, 96-well ibiTreat black μ -Plate w/ polymer coverslip bottom

96-well black μ -Plate; Quadratic (square) wells with 300 μ L working volume and a clear, flat bottom – Exhibits excellent inner and whole plate flatness; Made of a black polymer material – black walls guarantee low well-to-well crosstalk in fluorescence microscopy; Features high-quality #1.5 ibidi Polymer Coverslip, which is a thin plastic coverslip that forms the bottom of the imaging plate with a standard No. 1.5 coverslip thickness of 180 μ m (+10/-5 μ m) and that exhibits extremely low birefringence and autofluorescence, similar to that of glass; ibidi Polymer Coverslip is gas-permeable allowing for partial gas exchange between the medium and the incubator's atmosphere (should not be covered); The hydrophilic « ibiTreat » surface of the plate bottom is physically treated for enhanced cell adhesion of most cell types, even without a defined protein coating, while fully retaining optical quality; ibiTreat surface is ideal for the direct culture of many adherent cell lines (including primary cells) that do not need any specific coating and offers optimal growth conditions for various cell-based assays (note that ECM protein coatings can be done on ibiTreat without any restrictions); Each well provides a coating area of 2.35 cm² and a growth area of 0.56 cm²; ibidi Polymer Coverslip is compatible with solvents commonly used for cell staining and fixation (e.g, Formaldehyde) and a list of recommended immersion oils (e.g., ibidi immersion oil, p/n 50101) when using oil immersion objectives; Meets all optical requirements for microscopes; Allows to perform high-resolution microscopy in a standard multi-well format through the ibidi Polymer Coverslip bottom with the highest optical quality and without any disruptive autofluorescence; Suitable for various imaging and fluorescence-based techniques with uncompromised resolution and choice of wavelength including phase contrast, DIC, widefield fluorescence imaging, confocal microscopy, two-photon microscopy, FRAP, FRET, FLIM, or LSFM; Designed for high-end microscopic analysis of fixed or living cells – To analyze cells, no special preparations are necessary. Cells can be directly observed live or fixed through the bottom, preferably on an inverted microscope; Optimized for high-throughput assays and screenings; For optimal results in fluorescence microscopy and storage of fixed and stained samples, mounting media (p/n 50001 and 50011) are available by ibidi; Useful in a wide range of applications including fluorescence microscopy, high throughput screening (HTS), high-resolution microscopy of cells, compound screenings (toxicology), large-scale transfection experiments, live cell and timelapse (for extended periods) imaging, and immunofluorescence staining and assays; Compatible with robotics, plate readers, and multi-channel pipetting due to a standard ANSI/SLAS (SBS) microtiter plate format and well geometry; Suitable for use with fluorescence scanners; Features standard well numbering (A-H, 1-12); Temperature-stable up to 80°C/175°F; Stackable to save space in the incubator (up to 6 plates max due to stability reasons); Intended for one-time use and is not autoclavable; Shelf life under proper storage conditions (in a dry place, RT 15-25°C, no direct sunlight) is 36 months; Supplied with a lid; Sterilized and welded in a gas-permeable packaging

Nunc™ Edge™ 96-well cell culture-treated microplate

Nunc™ Edge™ 96-well microplate; Round wells with flat bottom; Low flange design – ensures reliable handling in robotic operations; Nunclon™ Delta-treated surface – promotes maximum cell attachment and growth; Nunclon™ Delta cell-culture treatment is certified for monolayer formation, cloning efficiency, non-cytotoxic, non-pyrogenic, and sterility; Culture area is about 0.35 cm² per well; Features a surrounding/large perimeter built-in moat divided into 4 sectional reservoirs, each can be filled with 1.7 to 2.0 mL sterile water or media – serves as an evaporation barrier during extended incubation, enhancing cell viability and significantly reducing well-to-well variability across the entire plate; The uniquely engineered Nunc Edge 2.0 96-well plate is designed to minimize evaporation of cell culture medium from the plate and the risks associated with the “edge effect” that may occur on a standard 96-well plate; Suitable for various applications including cell-based assays, binding assay, high throughput screening; The use of the Nunc Edge 2.0 96-well plate can increase the throughput of assays by 37.5% over that of typical cell-based assays that use only the 60 inner wells of the plate; Compliant with the ANSI microplate standards; Compatible with robotic liquid handling stations as well as automated cell detection and cell analysis equipment (e.g. Thermo Scientific™ Varioskan™ LUX); When used with the Thermo Scientific™ Varioskan™ LUX multimode microplate reader, the filled moat of the plate functions as passive humidity control, allowing for simultaneous incubation and signal detection during long-term applications with living cells inside the plate reader without significant evaporation of the liquid in the sample wells; Supplied with a lid that maximizes ventilation while maintaining sterility; RECOMMENDATION: Replenish fluid in the reservoirs every 3 days in the humidified incubator to ensure the effectiveness of the evaporation barrier

TPP 12-well tissue culture test plate

TPP tissue culture test plate; 12 wells; Made of clear, transparent Polystyrene (PS) for excellent viewing; Flat (F-base) growth surface of 3.466 cm²; The growth area, precisely on the spherical zone of the well only but not its sidewall, is opto-mechanically activated for optimal adhesion of cells to the plastic surface, resulting in plane and growth enhancing surface that has an optimal proliferation effect; The air-venting system of the lid consists of spacer cams located on the inside of the lid that guarantee controlled and constant gas and moisture exchange with minimal evaporation for optimal aeration of the culture; Designed for the cultivation and growth of cells as well as for cell-based assays, such as cell viability and microbial growth assays; Not suited for use in ELISA tests due to the low binding capacity of the TPP plate; Maximum medium volume of 5 mL per well; Recommended working medium volume of 1-2 mL per well; Exhibits excellent optical characteristics; Suitable for precise photometric measurements (the measuring light is not distracted by the geometry) as well as microscopy applications (bottom reading); Compatible with an appropriate adjustment on common absorption plate readers and cell imaging systems; Recommended for measurements at >300 nm; Not suitable for luminescence measurements; Features a yellow marking area on the side of the lid and the plate for writing and correct lid orientation; The sloped corner allows placement of the lid in one position only; The ridged grip area ensures a secure grasp and better handling and prevents from accidentally lifting off the lid; A black alpha-numerical labelling is used on the side for quick and easy identification of wells; The clear alpha-numerical identification mark next to each well simplifies the orientation during operations under microscope; The stacking rim enables safe stacking of several plates, also in combination with other TPP plates of different well number; The air vents in the plate base or the bottom rim provide consistent air-flow and heat distribution in the incubator even between stacked plates and consequently prevent condensation; For centrifugation, the use of suitable rotors or centrifuge adapters is recommended; Shows a uniform base area in accordance with the recommendations of ANSI 1-2004; For research use only and not intended for use in clinical, diagnostic or therapeutic procedures; Intended for single use only; Storage before use at room temperature and protect from UV light

FLAVER 30 ML GLASS VIAL DOMINO

OneLab reference: [218.3631]

Nalgene™ 30 mL narrow-mouth HDPE bottle

Nalgene™ 30 mL round HDPE Lab Quality bottle; Narrow-mouth; 20 mm neck finish; Translucent; Manufactured from high-quality, laboratory-grade, non-toxic plastic (High-density polyethylene, HDPE) materials for dependably low leachables and extractables; Semi-rigid structure; Exhibits heavy-duty, uniform walls that provide durability and resistance to splitting or punctures; Supplied with a one-piece, linerless polypropylene (PP) screw cap that guarantees leakproof protection at ambient temperature and pressure without the use of a liner that can wrinkle, cause leaks or contamination; All-purpose bottle – a highly reliable and durable container for versatile usage including packaging, storing, and transporting liquid solutions; Specifically designed for long-term, demanding lab use; Offers excellent chemical resistance; Can be used for freezer storage at temperatures as low as -100°C; Non-graduated; For most general applications, wash in a mild (non-alkaline cleaning agent is recommended) detergent, followed by a rinse with tap water, and then distilled water; Meets the requirements for food and beverage use

384-PCR PLATE COOLED DOMINO

OneLab reference: [218.3761]

MicroAmp™ 40 µL optical 384-well skirted reaction plate w/ barcode

MicroAmp™ 40 µL optical 384-well reaction plate with barcode; Skirted – fits securely over a thermal cycler with a raised block and provides enhanced mechanical strength for use with robotic platforms; Conical well bottom; Standard well profile – delivers standard reaction speed; Flat deck enabling a universal fit with most thermal cycles and facilitating sealing and handling; Constructed from a single rigid piece of polypropylene (PP) in a 384-well format – can withstand rapid changes in temperature and helps to minimize absorption of reaction components, Displays frosted wells to minimize interfering fluorescence from wells of cycling block – alternative to white plastic for qPCR if the fluorescence detector is oversaturated; Features a unique design that provides a barrier to ambient air to help ensure well-to-well temperature uniformity; Each reaction plate includes a unique serialized, eight character number barcode that is user- and machine-readable to allow error-free tracking; Designed to provide superior temperature accuracy and uniformity for fast, efficient PCR amplification for all samples; Compatible for use with Applied Biosystems™ PCR thermal cyclers, 384-well real-time PCR systems, and various genetic/ DNA analyzers; Ideal for high-throughput applications; Sealing using optical adhesive films (p/n 4311971) ensures high optical efficiency and tight sealing over wells to prevent evaporation and cross-contamination; with engraved/molded alphanumeric labeling for well/sample identification; May be stored at room temperature

20ML SERUM VIAL DOMINO

OneLab reference: [218.3881]

WHEATON® 20 mL clear glass serum vial

WHEATON® 20 mL serum vial; Clear glass; Crimp neck finish - securely sealed with aluminum crimp caps; Made from type I borosilicate glass tubing to ensure uniform wall thickness; Tubular design provides excellent clarity and dimensional consistency from vial to vial; Lighter weight compared to molded bottles; Withstands the challenges of low pressure and extreme temperature variations; Protects against changes in pH and maintain the purity of the contents; Blowback feature of neck and specially designed bottom radius add strength for freeze-drying applications; Ideal for lyophilization, packaging, and sampling applications

Manufacturer:
DWK Life Sciences

Ø13MM TUBE DOMINO

OneLab reference: [218.3971]

13x84mm collection tube, virus preservation medium

Labeled, skirted (self-standing), 13x84 mm sample collection and storage tube with internal round bottom filled with virus preservation medium; Features a PP screw cap; Convenient for collection and transportation of viruses such as Coronavirus, virus of flu, bird flu, hand-foot and mouth disease, measles, etc; Especially suitable for the collection and inactivation of 2019-nCoV; Withstands high temperature variations without deformation (121°C, 15min) or embrittlement (-196°C); Enables secure processing by centrifugation and shaking; Leakage proof; Contains 1-2 mL of preservation medium including virus lysates and nucleic acid preservation additives - inactivate viruses in collected specimens and maintain the integrity of viral nucleic acids at room temperature for up to 7 days; Viral RNA samples can be used for direct RT-PCR analysis without RNA extraction (preservation solution can be used as a template for RT-PCR reaction) or for high throughput sequencing; Glass beads inside the tube facilitate elution, thereby releasing more viruses into the preservation solution; Used with sterile, nylon-flocked swab for efficient sample collection and complete release of samples into the preservation solution

5ML MICROTUBE DOMINO

OneLab reference: [218.4031]

Eppendorf 5 mL DNA LoBind® microtube

Eppendorf 5 mL microtube; Conical bottom; DNA LoBind® properties - a combination of special manufacturing technologies and selected polypropylene batches ensures optimized recovery rates of nucleic acids by significantly reducing sample-to-surface binding (low DNA binding affinity, nearly 100% recovery of DNA/RNA molecules); Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; Exhibit a high centrifugation stability and chemical resistance; with attached lid - precise sealing for minimal evaporation; Represents the perfect option for working with medium-sized sample volumes - enables the simple and safe processing of sample volumes up to 5 mL; Ideal for preparation and long-term storage of nucleic acids samples; Suitable for various applications including forensic trace analysis, preparation of dilution series in quantitative qPCR, preparation of master mixes for PCR reactions, restriction analysis, DNA-microarray hybridization, sample preparation for NGS, and creation of genomic or oligonucleotide libraries

Manufacturer:
Eppendorf

5ML MICROTUBE DOMINO

OneLab reference: [218.4031]

Eppendorf 5 mL protein LoBind® microtube

Eppendorf 5 mL microtube; Conical bottom; Protein LoBind® properties - a special, two-component polymer mix creates a hydrophilic surface that ensures optimized recovery rates of valuable samples by significantly reducing sample binding to the surface (low protein binding affinity); Specially designed for use in protein research or with sensitive proteomic assays where protein concentration tends to be very small and sample recovery is vital for assay results; Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; with attached lid - precise lid sealing to minimize evaporation during storage and incubation; The hinged lid prevents from accidental opening during use at -86°C to 80°C; Represents the perfect option for working with medium-sized sample volumes - enables the simple and safe processing of sample volumes up to 5 mL; Ideal for preparation and/or storage of protein, peptide or antibody samples - more protein can be recovered for downstream analyses; Suitable for enzymatic assays - the hydrophilic surface reduces denaturing effects and enzymes remain active; Recommended for collection and storage of viral samples - prevents sample loss during storage; Can be used for storage of cell suspensions

5ML MICROTUBE DOMINO

OneLab reference: [218.4031]

Eppendorf 5 mL Tube® with screw cap

Eppendorf 5 mL screw-cap Tube®; Eppendorf Quality™; Colorless; Conical shape – exhibits the same diameter and bottom shape as 15 mL conical tube and therefore is compatible with the same accessories; Features an HDPE (High-Density Polyethylene) secure screw cap with flattened and grooved sides that provide optimal grip and user-friendly handling; Made of exceptionally high-quality, virgin, transparent polypropylene (PP) without the use of slip agents, plasticizers, and biocides that could leach out of plastic consumables and negatively affect experiments by interfering with the results and measurements of various bioassays (e.g. enzyme activity or receptor-binding assays) – provides a safe solution for sample preparation and storage to achieve the highest reliability and consistency of biological test results; Low wetting characteristic; High chemical resistance; Offers a broad operating temperature range from -86 to +100 °C; Provides high centrifugation stability – offers maximum safety and stability for centrifugation up to 25,000 x g) for reliable, fast, and efficient protocols; Very useful for working with medium-sized sample volumes – allows for simple and safe sample preparation and easy processing of sample volumes up to 5 mL; Guarantees higher yields in DNA isolation even from samples with a limited quantity of source material (e.g. low-copy plasmid DNA) by increasing the culture volume; Suitable for cell-based applications including contamination-free cell culture and safe cell/tissue lysis; Allows for easier sample access associated with a lower risk of spillage, significantly reducing the risk of contamination; Convenient for the preparation of master mixes and buffers, eliminating the need for splitting large volumes across several smaller tubes; Can be used for routine preparation, mixing, centrifugation, incubation, and safe storage of solid and liquid samples as well as solutions and reagents in volumes up to 5 mL; Space-saving solution – Less storage space needed; Equipped with a graduation and a labelling area for identification; Intended for research purposes only – NOT suitable for use in diagnostic or therapeutic applications; Do NOT use in liquid nitrogen

**VACUETTE® 3 mL
K2EDTA collection tube**

VACUETTE® 3 mL K2EDTA blood collection tube; 13x75 mm size; Features a lavender, non-ridged safety pull cap with a black exterior ring (black ring indicates tube with standard draw volume) designed to minimize aerosol generation; Manufactured from virtually unbreakable, clear Polyethylene Terephthalate (PET) plastic; Evacuated tube for venous blood specimen collection with a pre-defined vacuum for exact draw volume; The interior of the tube wall is sterile and coated (spray-dried) with K2EDTA yielding a ratio of 1.8 mg/mL of blood when the evacuated tube is filled correctly to its fill volume – EDTA binds calcium ions and blocks the coagulation cascade; Not equipped with a gel separator; Provides a mean for collecting, transporting, and processing blood in a closed evacuated system for testing serum, plasma or whole blood in the clinical laboratory; Designed for use in the examination of whole blood in hematology applications; May be used for testing in routine immunohematology, i.e., red cell grouping, Rh typing and antibody screens or for viral marker testing in screening and clinical laboratories; Can be used in the closed mode with direct sampling analyzers; The performance characteristics of this device have not been established for testing plasma in molecular diagnostics in general; Single-use container; For in vitro diagnostic use; Store at 4-25°C

LABELED TEST TUBE DOMINO

OneLab reference: [218.4281]

VACUETTE® 4 mL Z
No Additive collection tube

VACUETTE® 4 mL blood collection tube; 13x75 mm tube size; U-shaped bottom; Made of Polyethylene Terephthalate (PET); Version "Z No Additive" – the tube does not contain any chemical additive, but is evacuated and the tube interior is sterile; Plastic tube with a pre-defined vacuum for exact draw volumes; Fitted with a unique VACUETTE® safety cap – white cap/black inner ring; Innovative PREMIUM tube and unique screw thread type – features a Safety Twist Cap for maximum handling comfort and safety, ensuring hygienic, easy opening of the tube (no risk of blood splashes and aerosol effect) by a gentle, controlled twist movement (cannot be removed by a simple pull action) and secure transport due to firm hold of cap; Can be used as a discard tube or for the collection of venous blood; Recommended to collect, transport and process blood for testing serum, plasma or whole blood in the clinical laboratory (to be used only by trained healthcare professionals according to instructions of use); with paper label; without barcode; Store tubes at 4-25°C; NOTE: Avoid exposure to direct sunlight. Exceeding the maximum recommended storage temperature may lead to impairment of the tube quality (i.e. vacuum loss, coloring, etc.); For in-vitro diagnostic use; The tube is single-use and can be used on a single patient only

NON-ANSI PLATE DOMINO

OneLab reference: [218.4341]

Nunc™ 0.3 mL 96-MicroWell™ plate

Nunc™ 0.3 mL 96-MicroWell™ storage plate; Round wells with conical bottom - achieve optimal sample recovery; Made from polypropylene (PP) with low binding characteristics - ensures homogeneous assays and storage; Features a shared wall design that increases well volume; Offers excellent temperature and chemical resistance; Ideal for storage applications; Suitable for use as a collection plate for Nunc™ filter plates; Used as a sample collection plate in the NeoBase™ Non-derivatized MSMS kit (PerkinElmer, p/n 3040-001U) which is intended for the detection of metabolic disorders from a single dried blood spot sample using the MS/MS tandem mass spectrometer; Features a pinch bar design that facilitates manual and automated processing using robotic systems; Not compliant with ANSI standard microplate footprint dimensions; Supplied without lid; For research use only - not for use in diagnostic procedures

Ø16MM 30X TUBE DOMINO

OneLab reference: [218.4371]

DURAN® 17 mL 16x130mm test tube with straight rim

DURAN® 17 mL test tube; 16x130 mm size; with straight rim and a round bottom; 1.0 - 1.2 mm wall thickness offering exceptional mechanical strength; Manufactured from borosilicate glass 3.3, clear – provides excellent chemical resistance, virtual inert behavior, high light transparency, and minimal thermal expansion giving relatively high resistance to temperature changes (has a high maximum usage temperature); Considered as universal cylindrical laboratory glassware often used for chemical reactions, pretreatments as well as for transferring and storing substances or small amounts of liquid; Suitable to carry out reaction controls, test series, and preliminary samples; Features a fired-on, highly durable white ceramic; Reusable and autoclavable

RACKED TUBES DOMINO

OneLab reference: [218.4641]

Micronic 1.1 mL 2D-coded internal thread V-bottom tube in 96x rack

Micronic 1.1 mL 2D Data-Matrix coded screw-cap sample storage tube; Flat outer tube bottom; Inner V-shaped (conical) bottom – helps achieve a maximum sample recovery and the lowest dead volume; Internal thread – provides optimal sealing for storage at low temperatures; The screw-cap tube features a single turn thread for easy opening and closing of the tube; Manufactured from medical-approved, ultra-pure grade polypropylene (PP); Exhibits a low protein binding and extractable-free internal surface; Guarantees high resistance to many organic solvents such as DMSO, methanol, and dichloromethane; Offers superior mechanical strength and high tolerance to temperature extremes – can be used in a large temperature range, in cryogenic temperatures down to vapor-phase liquid nitrogen, LN₂ (between -150°C and -196°C, depending on the location and the distance away from the liquid nitrogen vessel) up to +100°C; Supplied uncapped, snap bulk – the «snap» feature enables tubes to be locked into the rack wells to prevent sample loss from overturned racks; Works equally well with either screw caps or TPE push caps for secure sealing depending on storage conditions – for effective cryogenic storage, a screw cap with silicone O-ring is recommended to allow for the tightest seal possible, whereas for storage from -80°C and above, either a push cap or screw cap can be used; Provides a high fill rate with a working volume of 0.8 mL when used with a screw cap or 0.9 mL when used with a push cap; The unique Data-Matrix 2D code, permanently laser-etched on the black code surface on the tube bottom, guarantees reliable long-term sample identification – 2D codes are proven to be chemically and mechanically resistant and can be easily read by scanners and readers; Loaded into a Micronic 1D barcoded 96-3 tube storage rack with a low cover (Micronic, p/n MP51207) that accommodates up to 96x individual Micronic 1.1 mL tubes with internal thread, capped with either push caps or low profile screw caps; The 96-well format rack has an automation-friendly, standard ANSI/SLAS dimensional footprint; The Micronic Ultra-Low Temperature (ULT) 96-3 rack is made from the highest purity polycarbonate (PC) with excellent properties for low-temperature conditions (vapor phase LN₂ to +140°C), which makes it ideal for long-term use in automated cryogenic storage facilities and has many unique features including its extremely strong design for minimal deformation due to temperature changes, a novel “icebreaker” cover lock mechanism for cryogenic storage, a highly transparent cover for easy visual checking of the enclosed samples, and a combination of laser-etched alphanumeric coding on top of the rack serving as visual location aids and a unique laser-etched 1D barcode with a human-readable code on the A1-H1 side of the rack for proper traceability; The storage rack features closed sidewalls with minimal notches for perfect rack orientation and an open-bottom design to facilitate quick defrosting of samples; The Micronic storage rack is suitable for use with automated handling and sample storage systems (-20°C, -80°C, and lower temperatures) and features a Twist-Lock design that prevents tubes from turning during screw (de)capping; The high-quality Micronic tubes ensure that the integrity of samples is preserved at ultra-low temperatures over extended periods of time; Micronic tubes are used to fully track and trace valuable samples throughout the entire sample storage process; The Micronic rack is autoclavable; NOT recommended for use in liquid phase nitrogen

RACKED TUBES DOMINO

OneLab reference: [218.4641]

Micronic 3 mL 2D-coded external thread Flat-bottom tube in 48x rack

Micronic 3 mL 2D Data-Matrix coded screw-cap sample storage tube; Flat outer tube bottom; Inner flat bottom; External thread hybrid – optimizes the working volume of the tube by allowing for a higher volume of material to be stored and helps improve sample integrity by minimizing the risk of cross-contamination; Provides a high fill rate with a working volume of 2.9 mL; The screw-cap tube features a triple start thread that ensures optimal sealing quality for long-term sample preservation and storage at ultra-low temperatures; The screw cap is designed with a unique lock when sealed to prevent it from overturning manually or mechanically; Manufactured from medical-approved, ultra-pure grade polypropylene (PP); Offers a low protein binding surface; Exhibits thick tube walls, sturdy design, and excellent properties for ultra low-temperature storage down to vapor-phase liquid nitrogen (LN₂); Features white sidewalls with high-contrast, permanently laser-etched 1D barcode and numeric human-readable code on one sidewall (the other side is blank for own labeling) in addition to a unique, chemically-resistant 2D Data-Matrix code laser-etched on the white code surface on the tube bottom – this 4 coding options combine automated and visual sample identification during the storage/retrieval process or field research and guarantee sample traceability; The bottom code surface of the tube has a raised edge, which protects the 2D Data-Matrix code against mechanical damage; The transparent parts of the tube wall enable easy visual checking of the sample; Loaded into a Micronic 1D barcoded 48-3 tube storage rack with a high cover (Micronic, p/n MP51302) that accommodates up to 48x individual Micronic 3 mL tubes with external thread, capped with screw caps; The 48-well format rack has an automation-friendly, standard ANSI/SLAS dimensional footprint; The Micronic Ultra-Low Temperature (ULT) 48-3 rack is made from the highest purity polycarbonate (PC) with excellent properties for low-temperature conditions (vapor phase LN₂ to +140°C), which makes it ideal for long-term use in automated cryogenic storage facilities and has several unique features including its extremely strong design for minimal deformation due to temperature changes, a novel “icebreaker” cover lock mechanism for cryogenic storage, a highly transparent cover for easy visual checking of the enclosed samples, and a combination of laser-etched alphanumeric coding on top of the rack serving as visual location aids and a unique laser-etched 1D barcode with a human-readable code on the A1-H1 side of the rack for proper traceability; The storage rack features closed sidewalls with minimal notches for perfect rack orientation and an open-bottom design to facilitate quick defrosting of samples; The Micronic storage rack is suitable for use with automated handling and sample storage systems (-20°C, -80°C, and lower temperatures) and features a Twist-Lock design that prevents tubes from turning during screw (de)capping; The high-quality Micronic tubes ensure that the integrity of samples is preserved at ultra-low temperatures over extended periods of time; Micronic 3 mL tubes with external thread increase overall sample storage efficiency and are used to fully track and trace valuable samples throughout the entire sample storage process; The Micronic rack is autoclavable; NOT recommended for use in liquid phase nitrogen

Ø46MM BOTTLE DOMINO

OneLab reference: [218.4801]

DURAN® 50 mL amber glass laboratory bottle

DURAN® 50 mL original laboratory bottle; with GL 32 thread; 46x91 mm size; Manufactured from ambered, type I borosilicate glass 3.3 – provides excellent thermal performance and high resistance to chemical attack; Displays uniform wall thickness and a very steady due to large base; The only external application of a durable amber layer guarantees that light-sensitive contents are protected from the effects of photodegradation while ensuring that internal surfaces maintain standard DURAN® glass properties; Protection against ultra-violet light conforms to standards with less than 10% spectral transmission between 290 nm and 450 nm; DURAN® is a neutral glass (classified as Glass Type I) well suited to applications in the pharmaceutical industry; Features an easy-to-read scale with graduation marks and a marking area in highly durable, white ceramic print; Supplied complete with a blue polypropylene screw cap and pouring ring for use up to 140°C – ensures tight sealing and simple, drip-free pouring; All components are autoclavable at 121 or 134°C

COLLECTION LABWARE RACK DOMINO

OneLab reference: [218.4611]

ArcticWhite, 290 mL single cavity reservoir

ArcticWhite, 290 mL single cavity reservoir; Features 8-row pyramid, V-shaped bottom for maximum sample recovery; Used with an automated system, it allows for 8-channel pipetting of reagents or working solutions column-wise into a 96-well plate, Used manually, it allows for 8- or 12-channel pipetting of reagents or working solutions into an entire column or row of a 96-well plate, respectively; Useful for sample preparation

IMPORTANT

The ArcticWhite, 290 mL single cavity reservoir can be supported by the Collection Labware Rack Domino only when used with **Extraction+**. Otherwise, you should use the ArcticWhite, 290 mL single cavity reservoir with the Long Edge Tilt Deepwell Domino (Waters P/N 186010200) as a main holder.

COLLECTION LABWARE RACK DOMINO

OneLab reference: [218.4611]

Waters 2 mL 12x32 mm LC/GC screw-top vial, racked

Waters LC/GC certified autosampler 2 mL screw neck clear glass vial; Flat bottom; Threaded top; 12x32 mm vial size; Loaded into a collection labware rack used with the Extraction+ manifold that accommodates up to 24 vials; Tested for cleanliness by HPLC; With screw neck cap and PTFE/Silicone septum; Used for sample preparation for chemical analysis using liquid or gas chromatography techniques coupled or not with mass spectrometry

MICROPLATE SHAKER+

OneLab reference: [518.4000]

Abgene™ 0.8 mL 96-deep well storage plate

Abgene™ 0.8 mL 96-deep well storage plate; Round well shape; V-conical well bottom – improves sample recovery and decreases dead volume; Manufactured using high-quality, medical-grade virgin polypropylene (PP) resin for superior quality and performance of the storage plate – provides excellent chemical resistance to solvents such as DMSO, EtOH, and IPA, minimizes the risk of extractables and leachables, and finally ensures high temperature stability (-80°C to + 121°C); Low binding PP maximizes recovery of valuable samples; Clean room manufactured from molding to final packaging to ensure repeatability and the absence of contamination; Abgene storage plate applications comprise compound storage, High Throughput Screening (HTS), genomics, and cell culture; Certified DNase, RNase, and human DNA free for demanding applications such as molecular biology (nucleic acid manipulation) or compound storage; Offers storage security for assays, compound libraries or storing samples for either intermediate or long-term use; Allows increased well volume for maximum sample stored per plate; Designed to ANSI standards achieving compatibility with a variety of automated liquid handling applications for high throughput workflows; Multiple sealing solutions are available including adhesive or heat seals (0.8 mL max well volume), cap strips (0.7 mL max well volume), and sealing mats (0.55 mL max well volume) along with sealing equipment (e.g. ALPS30 manual heat sealer) specially designed to deliver efficient, secure sealing and minimize evaporation and contamination of samples for instance when performing PCR or during sample storage; For research use only, not for use in diagnostic procedures

Azenta 0.9 mL external thread dual-coded tube in 96x rack

Azenta 0.9 mL external thread, dual-coded tube; Loaded in a 96-format SBS rack (high-base rack) with a linear barcode on the side to be read more easily (Azenta Life Sciences, p/n 66-61002); Sealable with a PP, automation-friendly screw cap (a deforming compression, non-silicone seal preventing the cap from being over-tightened) that provides flexibility to use tubes across a range of automated tube handling platforms - features a double-start thread for a reliable, secure, and consistent screw cap seal as well as facilitating automation; Leak tested to ensure sample security; The external thread improves sample safety (reduces chances of cross-contamination) while maximizing sample storage volume (provides higher working volume than internally threaded tubes); Features a high-contrast, permanently laser-etched 2D code and a human-readable number on the tube base, ensuring a permanent link between sample and data; 2D code is reliably readable without removing tubes from rack, thereby enabling a more streamlined workflow; Guarantees the highest level of sample security, management, and tracking in high-density storage applications; Suitable for long-term, secure storage of samples in biobanks, compound libraries, and a broad range of biological and chemical materials, including cryogenic storage to -196°C in vapor phase liquid nitrogen (Not for use in liquid phase nitrogen); Compatible with low throughput manual, semi-automated or fully automated workflows on integrated platforms; Supplied capped and racked

Eppendorf 0.5 mL 96-deep well protein LoBind® plate, yellow frame

Eppendorf 0.5 mL 96-deep well plate; Yellow frame border; Round colorless wells with round bottom; Protein LoBind® properties - a special, two-component polymer mix creates a hydrophilic surface that ensures optimized recovery rates of valuable samples by significantly reducing sample binding to the surface (low protein binding affinity); Specially designed for use in protein research or with sensitive proteomic assays where protein concentration tends to be very small and sample recovery is vital for assay results; Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; RecoverMax® well design - optimized well geometry for minimal remaining/dead volume and excellent mixing properties; Raised well rims and a smooth surface ensure reliable sealing; Ideal for preparation and/or storage of protein, peptide or antibody samples - more protein can be recovered for downstream analyses; Suitable for enzymatic assays - the hydrophilic surface reduces denaturing effects and enzymes remain active; Recommended for collection and storage of viral samples - prevents sample loss during storage; Can be used for storage of cell suspension; High-contrast unique OptiTrack® matrix - up to 30 % faster sample identification and fewer pipetting errors

OneLab reference: [518.4000]

Eppendorf 2 mL 96-square deep well plate, yellow frame

Eppendorf 2 mL 96-deep well plate; Yellow frame border; Square clear wells with a round and smooth design of internal corners - prevent capillary effects (wicking) and reduce the risk of cross-contamination; Conical well bottom; Made of high-quality polypropylene (PP) - provides high resistance to chemicals and mechanical stress, and high tolerance to temperature extremes; PCR clean; Features a unique and easy-to-read OptiTrack® matrix, a laser-applied, high-contrast alphanumeric labeling of wells - allows rapid identification of samples and helps reducing pipetting errors; RecoverMax® well geometry - rounded edges in combination with optimized well bottom design maximize sample recovery and support excellent mixing properties; Ensures minimal residual/dead volume especially in automated applications and high uniformity from well to well, thereby achieving consistent and reliable application performance; Features raised well edges and smooth surface for reliable sealing including heat sealing; High g-Safe® centrifugation stability for faster processing and better sample quality; Manufactures without slip agents, plasticizers or biocides (leachables), substances that negatively affect bioassays results, thus eliminating the risk of interference for highest sample integrity; Suitable for various manual and automated applications such as sample storage at -86°C, sample preparation, DNA denaturation at 100°C, high throughput nucleic acid isolation, storage of genomic and oligonucleotide libraries, plasmid purification, and creation of dilution series; Comply with the SBS/ANSI standard dimensions; Enables seamless integration in automated systems; Easily stackable and sealable

Eppendorf twin.tec® 96-well skirted LoBind® PCR plate

Eppendorf twin.tec® 96-well PCR plate; Green frame; Fully skirted; One-piece design – combines a polycarbonate (PC) frame and polypropylene (PP) wells for optimum performance; Features an exceptionally solid, robust PC frame for ultimate rigidity and torque resistance; Certified PCR clean; PP clear conical wells with DNA LoBind® properties – a combination of special manufacturing technologies and selected polypropylene batches ensures maximum recovery rates of nucleic acids by significantly reducing their adsorption to the wall of the wells (low DNA binding affinity, nearly 100% recovery of DNA/RNA molecules); Free of surface coatings, thereby eliminating the risk of sample contamination; The low profile design enables low volume PCR; 150 µL maximum well volume when used with cap strips (strips with eight microcaps, with a flat or domed shape); Extremely thin-walled wells guarantee optimum and consistent heat transfer to the sample; Raised well rims provide effective sealing and reduce the risk of cross-contamination; Ideal for quantitative real-time PCR with low sample concentration and PCR amplification with low template concentration; Suitable for low volume PCR/qPCR reactions and NGS DNA library preparation; Specially designed to reduce the loss of target molecules and maximize yields in PCR and other molecular assays for better sensitivity and improved assay results; Compatible with automated systems; Skirted design allows for optimal use with automation and for labelling or barcoding (upon request); Stackable; OptiTrack® matrix for faster sample identification and fewer pipetting errors

FrameStar® 0.1 mL 96-well skirted low profile PCR plate, clear wells

FrameStar® 96-well skirted PCR plate; Low profile - decreases the «dead space» between the heated lid of the thermal cycler and the sample, which eliminates condensation forming on the side wall of the wells, preventing reduction in PCR volume and increasing the efficiency of the reaction; Displays 0.1 mL clear conical PP wells and a black PC frame with cut corner H1; Features ultra-smooth, uniform, thin-walled wells - enable optimal PCR and qPCR performance and results; The «RIG» option is characterized by an extra rigid skirt for use with automation systems - prevents the robotic gripper picking up more than one plate at a time; The rigid PC frame offers added mechanical stability and helps reducing thermal expansion and sample evaporation, thus delivering more consistent PCR results; The thermal stability of the rigid frame improves seal integrity; Specially recommended for low volume reactions (< 20 µL) such as low volume PCR; Compatible with the majority of standard 96-well PCR thermal blocks as well as real-time PCR and sequencing instruments; Lid option using the FrameStar® 96 NGS Lid (p/n 4ti-0287); Stackable

HardShell 96-well low-profile skirted PCR plate, blue/clear

HardShell 96-well PCR plate; Blue rigid frame (shell) with clear wells; Fully skirted for optimal robotic handling and labeling surface; Low-profile wells (16.05 mm) are optimized for low-volume reactions and fast PCR; Recommended reaction volumes of 5 to 125 μ L (200 μ L maximum); Uniform, thin-walled wells of polypropylene facilitate rapid and precise heat transfer and reduce well-to-well variability in optical assays; The rigid, two-component design provides superior stability and flatness, allowing precise positioning for automation; Specifically designed to withstand the stresses of robotic handling and thermal cycling; Footprint and well spacing match ANSI/SBS standard dimensions; Compatible with automated systems; with black lettering for easy well identification; For research use only, not for use in diagnostic procedures

Hard-Shell® 96-well low-profile skirted PCR plate, white/clear

Hard-Shell® 200 µL 96-well PCR plate; Fully skirted – provides a labeling surface and is ideal for automation; Exhibits a white shell and clear wells; Characterized by a patented, rigid two-component design specifically engineered to withstand the stresses of thermal cycling, robotic handling and heat sealing; The skirt and deck are made from a rigid thermostable polymer – prevents the distortion and shrinkage that may occur when regular single-component polypropylene PCR plates are exposed to high temperatures; The thin-wall wells are molded of virgin PP resin with low DNA binding properties, allowing optimal thermal transfer (fast PCR) and superior well-to-well uniformity in optical assays such as those performed in real-time qPCR; Conical well bottom for maximum sample recovery; Low-profile wells optimized for low-volume reactions and fast PCR reactions; The raised rims around each well ensure tight sealing using a variety of methods (e.g. pressure, adhesive and heat sealing); Sturdy plate with rigid skirt – well-suited for heat sealing; Warp-resistant plate – provides durability during automation, high-speed centrifugation, and storage (even at -80°C); Shows a superior stability and flatness allowing precise positioning and robotic handling; Delivers reliable performance in all PCR and real-time PCR applications; Features a black alphanumeric labeling for easy well identification; User-readable bar code options for convenient sample tracking in high-throughput settings; Footprint and well spacing match ANSI/SBS standard dimensions

AB0620

IMPORTANT

The processing of the Thermo Scientific™ 0.2 mL PCR microtube, racked with the Microplate Shaker+ requires the use of the 0.2 mL microtube 4x6 rack supplied with the 0.2mL Microtube Rack Domino bundle.

The 0.2 mL microtube rack is not available as an individual spare part. Therefore, to use this rack, you need to order the 0.2mL Microtube Rack Domino bundle (Waters P/N 186010303).

MICROPLATE SHAKER+

OneLab reference: [518.4000]

Thermo Scientific™ 0.3 mL 96-well U-bottom MaxiSorp Immuno plate

Thermo Scientific™ 0.3 mL 96-well Immuno plate; Standard format; High flange design; Round-shaped wells with round bottom – U-bottom well geometry optimizes washing and coating; Made of clear polystyrene (PS); Features a hydrophilic MaxiSorp surface which is ideal for antibody sandwich assays; MaxiSorp surface exhibits specific chemical characteristics that promote interactions with biomolecules and guarantee optimal binding/adsorption of antibodies (e.g., IgG); Well-suited to conduct colorimetric assays with reliable and reproducible results; Working volume range from 50 to 250 µL per well; Wells are alphanumerically labelled; Thermo Scientific 8-well strip caps for Immuno Standard Modules provide a positive seal for U-bottom wells; without barcode

Manufacturer:

Eppendorf twin.tec® 96-well skirted LoBind® PCR plate

Eppendorf twin.tec® 96-well PCR plate; Green frame; One-piece design - combines a polycarbonate (PC) frame and polypropylene (PP) wells for optimum performance; Fully skirted - robust PC frame for ultimate rigidity and torque-resistance; Certified PCR clean; PP clear conical wells with Lo-Bind® characteristics - maximize recovery rates of nucleic acids by reducing their adsorption to well walls (ensures nearly 100% recovery of DNA/RNA molecules for improved assay results); Free of surface coating to eliminate the risk of sample contamination; Very thin well walls - guarantee optimum and consistent heat transfer to the sample; Raised well rims for effective sealing and reduced cross-contamination; OptiTrack® matrix for faster sample identification and fewer pipetting errors; Ideal for real-time PCR and PCR amplification with low template concentration; Useful for low volume PCR/qPCR reactions and NGS DNA library preparation; Skirted design allows for optimal use with automation and for barcoding; Standard microplate footprint and dimensions

High-Profile 96-PCR Plate Adaptor,
Engraved Marking Code #A

OneLab reference: [518.2801]

FrameStar® break-a-way PCR plate in 96x FrameStrip® adaptor

FrameStar® 96-well break-a-way PCR plate; Semi-skirted plate with cut corner A12; Standard profile, clear 0.2 mL conical wells and purple frame; Divisible - vertically scored for easy separation into strips of 8 tubes or part plates (smaller plate sections); Utilizes the FrameStar® two-component technology, which combines the advantages of ultra-smooth, uniform, thin-walled polypropylene (PP) tubes for optimum PCR and real-time qPCR results, and a rigid polycarbonate (PC) frame for superior thermal stability of the plate during the PCR run; The FrameStar® two-component design prevents plate warping (distortion of tube strips) and thermal expansion which helps preserving the integrity of seals even at elevated temperatures, thus minimizing sample evaporation during thermal cycling and improving PCR results; The frame includes end tabs for easy handling and labelling, and alphanumeric grid reference to aid well and sample identification; Raised rims around each tube aid the prevention of cross-contamination between samples; Loaded into a 96-well format, skirted, white PC FrameStrip® adapter (Brooks Life Sciences, p/n 4ti-0370) – a 96-position plate that fits standard profile 8-tube strips or part plates perfectly, allowing for easy and secure handling; The adapter design includes locator pins on the deck to ensure 8-tube strips and part/full plate are always loaded in the correct orientation; The FrameStrip® adapter offers a solution for processing 8-tube strips or smaller plate sections in a plate format with automation platforms while maintaining flexibility for varying throughputs; The FrameStrip® adapter is supplied with a compatible clear polystyrene (PS) lid - provides protection for the strips during handling and shipping; FrameStar® plates are ideal for assay miniaturization due to improved level of seal integrity and minimal evaporation - reaction volumes can be reduced (downscaling) without any loss of assay sensitivity or consistency, leading to cost saving; Compatible with majority of thermal cyclers, real-time detection systems and sequencers; FrameStar® plates guarantee a reliable use on most automation platforms as plate distortion post-PCR is eliminated; Compatible with multichannel pipettes

FrameStrip® 8-well PCR tube strip in 96x FrameStrip® adaptor

FrameStrip® 8-well PCR tube strip; Standard profile, clear 0.2 mL conical tubes and blue frame; Features a two-component design, combining the advantages of thin-walled polypropylene (PP) tubes for optimum PCR results and a rigid polycarbonate (PC) frame for easy and reliable handling; Ensures efficient heat transfer; The inert surface of tubes exhibits low binding capabilities for nucleic acids, proteins and other molecules; The frame portion, molded in a rigid polymer, provides improved mechanical stability for the strip compared with traditional single piece products; The frame includes end tabs allowing for easy handling and labelling of the strips; Loaded into a 96-well format, skirted, white PC FrameStrip® adaptor (Brooks Life Sciences, p/n 4ti-0370) – a 96-position plate that fits up to 12 standard profile 8-tube strips perfectly, allowing for easy and secure handling; The adapter design includes locator pins on the deck to ensure 8-tube strips are always loaded in the correct orientation; The FrameStrip® adaptor offers a solution for processing PCR tube strips in a plate format with automation platforms while maintaining flexibility for varying throughputs; The FrameStrip® adaptor is supplied with a compatible clear polystyrene (PS) lid - provides protection for the strips during handling and shipping; FrameStrip® 8-well PCR tube strips offer a very flexible solution for PCR set-up with superior sealing (using strips of flat optical caps) and are compatible with the majority of thermal cyclers

PLATE HEATER-SHAKER+ WITH 96-DEEPWELL PLATE ADAPTOR

Plate Heater-Shaker+ OneLab reference: [518.4200]

WITH

96-Deepwell Plate Adaptor, Engraved
Marking Code #C

OneLab reference: [518.3131]

Abgene™ 0.8 mL 96-deep well storage plate

Abgene™ 0.8 mL 96-deep well storage plate; Round well shape; V-conical well bottom – improves sample recovery and decreases dead volume; Manufactured using high-quality, medical-grade virgin polypropylene (PP) resin for superior quality and performance of the storage plate – provides excellent chemical resistance to solvents such as DMSO, EtOH, and IPA, minimizes the risk of extractables and leachables, and finally ensures high temperature stability (-80°C to + 121°C); Low binding PP maximizes recovery of valuable samples; Clean room manufactured from molding to final packaging to ensure repeatability and the absence of contamination; Abgene storage plate applications comprise compound storage, High Throughput Screening (HTS), genomics, and cell culture; Certified DNase, RNase, and human DNA free for demanding applications such as molecular biology (nucleic acid manipulation) or compound storage; Offers storage security for assays, compound libraries or storing samples for either intermediate or long-term use; Allows increased well volume for maximum sample stored per plate; Designed to ANSI standards achieving compatibility with a variety of automated liquid handling applications for high throughput workflows; Multiple sealing solutions are available including adhesive or heat seals (0.8 mL max well volume), cap strips (0.7 mL max well volume), and sealing mats (0.55 mL max well volume) along with sealing equipment (e.g. ALPS30 manual heat sealer) specially designed to deliver efficient, secure sealing and minimize evaporation and contamination of samples for instance when performing PCR or during sample storage; For research use only, not for use in diagnostic procedures

**Eppendorf 0.5 mL 96-deep well
protein LoBind® plate, yellow frame**

Eppendorf 0.5 mL 96-deep well plate; Yellow frame border; Round colorless wells with round bottom; Protein LoBind® properties - a special, two-component polymer mix creates a hydrophilic surface that ensures optimized recovery rates of valuable samples by significantly reducing sample binding to the surface (low protein binding affinity); Specially designed for use in protein research or with sensitive proteomic assays where protein concentration tends to be very small and sample recovery is vital for assay results; Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; RecoverMax® well design - optimized well geometry for minimal remaining/dead volume and excellent mixing properties; Raised well rims and a smooth surface ensure reliable sealing; Ideal for preparation and/or storage of protein, peptide or antibody samples - more protein can be recovered for downstream analyses; Suitable for enzymatic assays - the hydrophilic surface reduces denaturing effects and enzymes remain active; Recommended for collection and storage of viral samples - prevents sample loss during storage; Can be used for storage of cell suspension; High-contrast unique OptiTrack® matrix - up to 30 % faster sample identification and fewer pipetting errors

MICROPLATE PELTIER+

OneLab reference: [518.4500]

TPP 12-well tissue culture test plate

TPP tissue culture test plate; 12 wells; Made of clear, transparent Polystyrene (PS) for excellent viewing; Flat (F-base) growth surface of 3.466 cm²; The growth area, precisely on the spherical zone of the well only but not its sidewall, is opto-mechanically activated for optimal adhesion of cells to the plastic surface, resulting in plane and growth enhancing surface that has an optimal proliferation effect; The air-venting system of the lid consists of spacer cams located on the inside of the lid that guarantee controlled and constant gas and moisture exchange with minimal evaporation for optimal aeration of the culture; Designed for the cultivation and growth of cells as well as for cell-based assays, such as cell viability and microbial growth assays; Not suited for use in ELISA tests due to the low binding capacity of the TPP plate; Maximum medium volume of 5 mL per well; Recommended working medium volume of 1-2 mL per well; Exhibits excellent optical characteristics; Suitable for precise photometric measurements (the measuring light is not distracted by the geometry) as well as microscopy applications (bottom reading); Compatible with an appropriate adjustment on common absorption plate readers and cell imaging systems; Recommended for measurements at >300 nm; Not suitable for luminescence measurements; Features a yellow marking area on the side of the lid and the plate for writing and correct lid orientation; The sloped corner allows placement of the lid in one position only; The ridged grip area ensures a secure grasp and better handling and prevents from accidentally lifting off the lid; A black alpha-numerical labelling is used on the side for quick and easy identification of wells; The clear alpha-numerical identification mark next to each well simplifies the orientation during operations under microscope; The stacking rim enables safe stacking of several plates, also in combination with other TPP plates of different well number; The air vents in the plate base or the bottom rim provide consistent air-flow and heat distribution in the incubator even between stacked plates and consequently prevent condensation; For centrifugation, the use of suitable rotors or centrifuge adapters is recommended; Shows a uniform base area in accordance with the recommendations of ANSI 1-2004; For research use only and not intended for use in clinical, diagnostic or therapeutic procedures; Intended for single use only; Storage before use at room temperature and protect from UV light

96-PCR PLATE PELTIER+

OneLab reference: [518.4600]

Eppendorf twin.tec® 96-well skirted LoBind® PCR plate

Eppendorf twin.tec® 96-well PCR plate; Green frame; Fully skirted; One-piece design – combines a polycarbonate (PC) frame and polypropylene (PP) wells for optimum performance; Features an exceptionally solid, robust PC frame for ultimate rigidity and torque resistance; Certified PCR clean; PP clear conical wells with DNA LoBind® properties – a combination of special manufacturing technologies and selected polypropylene batches ensures maximum recovery rates of nucleic acids by significantly reducing their adsorption to the wall of the wells (low DNA binding affinity, nearly 100% recovery of DNA/RNA molecules); Free of surface coatings, thereby eliminating the risk of sample contamination; The low profile design enables low volume PCR; 150 µL maximum well volume when used with cap strips (strips with eight microcaps, with a flat or domed shape); Extremely thin-walled wells guarantee optimum and consistent heat transfer to the sample; Raised well rims provide effective sealing and reduce the risk of cross-contamination; Ideal for quantitative real-time PCR with low sample concentration and PCR amplification with low template concentration; Suitable for low volume PCR/qPCR reactions and NGS DNA library preparation; Specially designed to reduce the loss of target molecules and maximize yields in PCR and other molecular assays for better sensitivity and improved assay results; Compatible with automated systems; Skirted design allows for optimal use with automation and for labelling or barcoding (upon request); Stackable; OptiTrack® matrix for faster sample identification and fewer pipetting errors

96-PCR PLATE PELTIER+

OneLab reference: [518.4600]

FrameStar® 0.1 mL 96-well skirted low profile PCR plate, clear wells

FrameStar® 96-well skirted PCR plate; Low profile - decreases the «dead space» between the heated lid of the thermal cycler and the sample, which eliminates condensation forming on the side wall of the wells, preventing reduction in PCR volume and increasing the efficiency of the reaction; Displays 0.1 mL clear conical PP wells and a black PC frame with cut corner H1; Features ultra-smooth, uniform, thin-walled wells - enable optimal PCR and qPCR performance and results; The «RIG» option is characterized by an extra rigid skirt for use with automation systems - prevents the robotic gripper picking up more than one plate at a time; The rigid PC frame offers added mechanical stability and helps reducing thermal expansion and sample evaporation, thus delivering more consistent PCR results; The thermal stability of the rigid frame improves seal integrity; Specially recommended for low volume reactions (< 20 µL) such as low volume PCR; Compatible with the majority of standard 96-well PCR thermal blocks as well as real-time PCR and sequencing instruments; Lid option using the FrameStar® 96 NGS Lid (p/n 4ti-0287); Stackable

96-PCR PLATE PELTIER+

OneLab reference: [518.4600]

FrameStar® break-a-way PCR plate in 96x FrameStrip® adapter

FrameStar® 96-well break-a-way PCR plate; Semi-skirted plate with cut corner A12; Standard profile, clear 0.2 mL conical wells and purple frame; Divisible - vertically scored for easy separation into strips of 8 tubes or part plates (smaller plate sections); Utilizes the FrameStar® two-component technology, which combines the advantages of ultra-smooth, uniform, thin-walled polypropylene (PP) tubes for optimum PCR and real-time qPCR results, and a rigid polycarbonate (PC) frame for superior thermal stability of the plate during the PCR run; The FrameStar® two-component design prevents plate warping (distortion of tube strips) and thermal expansion which helps preserving the integrity of seals even at elevated temperatures, thus minimizing sample evaporation during thermal cycling and improving PCR results; The frame includes end tabs for easy handling and labelling, and alphanumeric grid reference to aid well and sample identification; Raised rims around each tube aid the prevention of cross-contamination between samples; Loaded into a 96-well format, skirted, white PC FrameStrip® adapter (Brooks Life Sciences, p/n 4ti-0370) - a 96-position plate that fits standard profile 8-tube strips or part plates perfectly, allowing for easy and secure handling; The adapter design includes locator pins on the deck to ensure 8-tube strips and part/full plate are always loaded in the correct orientation; The FrameStrip® adapter offers a solution for processing 8-tube strips or smaller plate sections in a plate format with automation platforms while maintaining flexibility for varying throughputs; The FrameStrip® adapter is supplied with a compatible clear polystyrene (PS) lid - provides protection for the strips during handling and shipping; FrameStar® plates are ideal for assay miniaturization due to improved level of seal integrity and minimal evaporation - reaction volumes can be reduced (downscaling) without any loss of assay sensitivity or consistency, leading to cost saving; Compatible with majority of thermal cyclers, real-time detection systems and sequencers; FrameStar® plates guarantee a reliable use on most automation platforms as plate distortion post-PCR is eliminated; Compatible with multichannel pipettes

96-PCR PLATE PELTIER+

OneLab reference: [518.4600]

FrameStrip® 8-well PCR tube strip in 96x FrameStrip® adapter

FrameStrip® 8-well PCR tube strip; Standard profile, clear 0.2 mL conical tubes and blue frame; Features a two-component design, combining the advantages of thin-walled polypropylene (PP) tubes for optimum PCR results and a rigid polycarbonate (PC) frame for easy and reliable handling; Ensures efficient heat transfer; The inert surface of tubes exhibits low binding capabilities for nucleic acids, proteins and other molecules; The frame portion, molded in a rigid polymer, provides improved mechanical stability for the strip compared with traditional single piece products; The frame includes end tabs allowing for easy handling and labelling of the strips; Loaded into a 96-well format, skirted, white PC FrameStrip® adapter (Brooks Life Sciences, p/n 4ti-0370) – a 96-position plate that fits up to 12 standard profile 8-tube strips perfectly, allowing for easy and secure handling; The adapter design includes locator pins on the deck to ensure 8-tube strips are always loaded in the correct orientation; The FrameStrip® adapter offers a solution for processing PCR tube strips in a plate format with automation platforms while maintaining flexibility for varying throughputs; The FrameStrip® adapter is supplied with a compatible clear polystyrene (PS) lid - provides protection for the strips during handling and shipping; FrameStrip® 8-well PCR tube strips offer a very flexible solution for PCR set-up with superior sealing (using strips of flat optical caps) and are compatible with the majority of thermal cyclers

96-PCR PLATE PELTIER+

OneLab reference: [518.4600]

Hard-Shell® 96-well low-profile skirted PCR plate, white/clear

Hard-Shell® 200 µL 96-well PCR plate; Fully skirted – provides a labeling surface and is ideal for automation; Exhibits a white shell and clear wells; Characterized by a patented, rigid two-component design specifically engineered to withstand the stresses of thermal cycling, robotic handling and heat sealing; The skirt and deck are made from a rigid thermostable polymer – prevents the distortion and shrinkage that may occur when regular single-component polypropylene PCR plates are exposed to high temperatures; The thin-wall wells are molded of virgin PP resin with low DNA binding properties, allowing optimal thermal transfer (fast PCR) and superior well-to-well uniformity in optical assays such as those performed in real-time qPCR; Conical well bottom for maximum sample recovery; Low-profile wells optimized for low-volume reactions and fast PCR reactions; The raised rims around each well ensure tight sealing using a variety of methods (e.g. pressure, adhesive and heat sealing); Sturdy plate with rigid skirt – well-suited for heat sealing; Warp-resistant plate – provides durability during automation, high-speed centrifugation, and storage (even at -80°C); Shows a superior stability and flatness allowing precise positioning and robotic handling; Delivers reliable performance in all PCR and real-time PCR applications; Features a black alphanumeric labeling for easy well identification; User-readable bar code options for convenient sample tracking in high-throughput settings; Footprint and well spacing match ANSI/SBS standard dimensions

50ML TUBE MAGNET+

OneLab reference: [518.5500]

Nunc™ 50 mL conical centrifuge tube

Nunc™ 50 mL centrifuge tube; Conical bottom for maximum sample recovery; Made from high-purity polypropylene (PP); The inner surface is biologically inert; Supplied with a plug sealed, grooved screw cap for user-friendly opening/closing of the tube; Guaranteed leakproof to help protect samples and reagents from leaking out; Chemically-compatible with the most commonly used reagents; Offers a higher RCF rating (up to 17,000 xg) when fully supported by conical rotor cavity or conical adaptor, which enables a greater range of applications from low speed to superspeed centrifugation; Considered as a convenient and safe alternative to glass without sacrificing accuracy; Designed for functionality, flexibility, and ease of use; Features graduations and a large writing area for labeling; Disposable

96-PCR PLATE MAGNET+

OneLab reference: [518.5600]

Eppendorf twin.tec® 96-well skirted LoBind® PCR plate

Eppendorf twin.tec® 96-well PCR plate; Green frame; Fully skirted; One-piece design – combines a polycarbonate (PC) frame and polypropylene (PP) wells for optimum performance; Features an exceptionally solid, robust PC frame for ultimate rigidity and torque resistance; Certified PCR clean; PP clear conical wells with DNA LoBind® properties – a combination of special manufacturing technologies and selected polypropylene batches ensures maximum recovery rates of nucleic acids by significantly reducing their adsorption to the wall of the wells (low DNA binding affinity, nearly 100% recovery of DNA/RNA molecules); Free of surface coatings, thereby eliminating the risk of sample contamination; The low profile design enables low volume PCR; 150 µL maximum well volume when used with cap strips (strips with eight microcaps, with a flat or domed shape); Extremely thin-walled wells guarantee optimum and consistent heat transfer to the sample; Raised well rims provide effective sealing and reduce the risk of cross-contamination; Ideal for quantitative real-time PCR with low sample concentration and PCR amplification with low template concentration; Suitable for low volume PCR/qPCR reactions and NGS DNA library preparation; Specially designed to reduce the loss of target molecules and maximize yields in PCR and other molecular assays for better sensitivity and improved assay results; Compatible with automated systems; Skirted design allows for optimal use with automation and for labelling or barcoding (upon request); Stackable; OptiTrack® matrix for faster sample identification and fewer pipetting errors

96-PCR PLATE MAGNET+

OneLab reference: [518.5600]

FrameStar® 0.1 mL 96-well skirted low profile PCR plate, clear wells

FrameStar® 96-well skirted PCR plate; Low profile - decreases the «dead space» between the heated lid of the thermal cycler and the sample, which eliminates condensation forming on the side wall of the wells, preventing reduction in PCR volume and increasing the efficiency of the reaction; Displays 0.1 mL clear conical PP wells and a black PC frame with cut corner H1; Features ultra-smooth, uniform, thin-walled wells - enable optimal PCR and qPCR performance and results; The «RIG» option is characterized by an extra rigid skirt for use with automation systems - prevents the robotic gripper picking up more than one plate at a time; The rigid PC frame offers added mechanical stability and helps reducing thermal expansion and sample evaporation, thus delivering more consistent PCR results; The thermal stability of the rigid frame improves seal integrity; Specially recommended for low volume reactions (< 20 µL) such as low volume PCR; Compatible with the majority of standard 96-well PCR thermal blocks as well as real-time PCR and sequencing instruments; Lid option using the FrameStar® 96 NGS Lid (p/n 4ti-0287); Stackable

96-PCR PLATE MAGNET+

OneLab reference: [518.5600]

Hard-Shell® 96-well low-profile skirted PCR plate, white/clear

Hard-Shell® 200 µL 96-well PCR plate; Fully skirted – provides a labeling surface and is ideal for automation; Exhibits a white shell and clear wells; Characterized by a patented, rigid two-component design specifically engineered to withstand the stresses of thermal cycling, robotic handling and heat sealing; The skirt and deck are made from a rigid thermostable polymer – prevents the distortion and shrinkage that may occur when regular single-component polypropylene PCR plates are exposed to high temperatures; The thin-wall wells are molded of virgin PP resin with low DNA binding properties, allowing optimal thermal transfer (fast PCR) and superior well-to-well uniformity in optical assays such as those performed in real-time qPCR; Conical well bottom for maximum sample recovery; Low-profile wells optimized for low-volume reactions and fast PCR reactions; The raised rims around each well ensure tight sealing using a variety of methods (e.g. pressure, adhesive and heat sealing); Sturdy plate with rigid skirt – well-suited for heat sealing; Warp-resistant plate – provides durability during automation, high-speed centrifugation, and storage (even at -80°C); Shows a superior stability and flatness allowing precise positioning and robotic handling; Delivers reliable performance in all PCR and real-time PCR applications; Features a black alphanumeric labeling for easy well identification; User-readable bar code options for convenient sample tracking in high-throughput settings; Footprint and well spacing match ANSI/SBS standard dimensions

DEEPWELL MAGNET+

OneLab reference: [518.5700]

Abgene™ 0.8 mL 96-deep well storage plate

Abgene™ 0.8 mL 96-deep well storage plate; Round well shape; V-conical well bottom – improves sample recovery and decreases dead volume; Manufactured using high-quality, medical-grade virgin polypropylene (PP) resin for superior quality and performance of the storage plate – provides excellent chemical resistance to solvents such as DMSO, EtOH, and IPA, minimizes the risk of extractables and leachables, and finally ensures high temperature stability (-80°C to + 121°C); Low binding PP maximizes recovery of valuable samples; Clean room manufactured from molding to final packaging to ensure repeatability and the absence of contamination; Abgene storage plate applications comprise compound storage, High Throughput Screening (HTS), genomics, and cell culture; Certified DNase, RNase, and human DNA free for demanding applications such as molecular biology (nucleic acid manipulation) or compound storage; Offers storage security for assays, compound libraries or storing samples for either intermediate or long-term use; Allows increased well volume for maximum sample stored per plate; Designed to ANSI standards achieving compatibility with a variety of automated liquid handling applications for high throughput workflows; Multiple sealing solutions are available including adhesive or heat seals (0.8 mL max well volume), cap strips (0.7 mL max well volume), and sealing mats (0.55 mL max well volume) along with sealing equipment (e.g. ALPS30 manual heat sealer) specially designed to deliver efficient, secure sealing and minimize evaporation and contamination of samples for instance when performing PCR or during sample storage; For research use only, not for use in diagnostic procedures

Eppendorf 2 mL 96 96-square well plate, yellow frame

Eppendorf 2 mL 96-deep well plate; Yellow frame border; Square clear wells with a round and smooth design of internal corners - prevent capillary effects (wicking) and reduce the risk of cross-contamination; Conical well bottom; Made of high-quality polypropylene (PP) - provides high resistance to chemicals and mechanical stress, and high tolerance to temperature extremes; PCR clean; Features a unique and easy-to-read OptiTrack® matrix, a laser-applied, high-contrast alphanumeric labeling of wells - allows rapid identification of samples and helps reducing pipetting errors; RecoverMax® well geometry - rounded edges in combination with optimized well bottom design maximize sample recovery and support excellent mixing properties; Ensures minimal residual/dead volume especially in automated applications and high uniformity from well to well, thereby achieving consistent and reliable application performance; Features raised well edges and smooth surface for reliable sealing including heat sealing; High g-Safe® centrifugation stability for faster processing and better sample quality; Manufactures without slip agents, plasticizers or biocides (leachables), substances that negatively affect bioassays results, thus eliminating the risk of interference for highest sample integrity; Suitable for various manual and automated applications such as sample storage at -86°C, sample preparation, DNA denaturation at 100°C, high throughput nucleic acid isolation, storage of genomic and oligonucleotide libraries, plasmid purification, and creation of dilution series; Comply with the SBS/ANSI standard dimensions; Enables seamless integration in automated systems; Easily stackable and sealable

FILTER PLATES

AcroPrep™ Advance 350 µL 96-well filter plate, 10K Omega membrane

AcroPrep™ Advance 96-well filter plate; 350 µL volume capacity; Round well shape; Well-bottom area of 0.25 cm²; Constructed from chemically resistant and biologically inert polypropylene (PP) – ensures maximum functionality while providing intrinsic low binding properties to nucleic acids (NA) and proteins, and durability when using harsh organic solvents, preventing unwanted extractables and leachables; Equipped with a Pall Omega™ membrane of 10K MWCO (Molecular weight cut-off = 10 kDa), which is a polyethersulfone (PES) membrane specifically modified to minimize protein and NA binding; Optimized for ultrafiltration, a membrane separation technique used to rapidly separate extremely small particles and dissolved molecules in fluids based on their molecular size, although other factors such as molecular shape and charge can also play a role – molecules larger than the membrane pores will be retained by the membrane and concentrated during the ultrafiltration process; The low binding nature of the PES membrane guarantees high recovery (≥ 90%) of target biomolecules at low concentration and less surface fouling, which can impede effective retention performance; Features a smooth well design that helps achieving faster, more uniform filtration rates across the plate (improving well-to-well and plate-to-plate consistency), as well as reduced hold-up volume for maximum sample recovery; Recommended working volume ≤ 300 µL; Can be used on vacuum systems, with centrifugation, or with positive pressure systems; Recommended operating vacuum ≥ 25.4 cm Hg (10 in. Hg); Typical vacuum filtration performance of 10K Omega membrane = 20 min processing time, 5 µL hold-up volume; Recommended centrifugal force 1,500 xg; Typical centrifugal filtration performance of 10K Omega membrane = 8 min processing time, 2 µL hold-up volume; Uses a unique sealing mechanism to individually seal filter media into each well of the plate, preventing crosstalk and reducing the risk of cross-contamination between wells; Exhibits optimized outlet tips that minimize sample leakage during incubation steps and reduce the presence of clinging droplets following filtration; Ideally used for PCR clean-up, labelling clean-up, nucleic acid (DNA/RNA) purification, protein purification/separation by size exclusion, and free vs. bound protein assays; Suitable for high throughput procedures; Automation compatible – manufactured to meet the ANSI/SLAS microplate standards, allowing plates to be run in manual, semi-automated, and automated processes; The rigid, one-piece construction prevents the plate from flexing or jamming in robotic systems; Labeled wells facilitate easy sample identification; Each filter plate has a serialized barcode label that allows for easy, automated sample tracking and identification; The notch on the plate determines correct plate orientation; Features a smooth top surface and a textured window on the side of the plate for easy labelling

AcroPrep™ 7 mL 24-well Cell Clarification and Sterile Filtration plate

AcroPrep 24-well cell clarification and sterile filtration filter plate; 7 mL volume capacity; Square well shape; 1.6 cm² effective filtration area; Constructed from chemically-resistant and biologically-inert polypropylene; Utilizes Pall proprietary high-performance multi-layer filtration media and membranes integrated into one device – each well contains a Pall Seitz® depth media that efficiently captures whole cells and large cellular debris layered on top of a 0.65/0.2 µm asymmetric Supor® EKV PES (Hydrophilic polyethersulfone) membrane that provides an efficient sterile filtration layer; The Seitz depth media allows clarification of large cellular debris prior to filtration through the 0.65/0.2 µm EKV Supor membrane; The depth filter media have a high particulate holding capacity and will protect downstream microporous membrane filters from quickly clogging; Intrinsic plate and membrane properties minimize sample loss from non-specific binding while ensuring fast filtration with superior flow rates; Offers a one-and-done solution for protein purification and general sterile filtration workflows in a 24-well format; Suitable for use in a variety of applications including clone selection and clone candidate analysis, cell expansion studies, recombinant protein isolation prior to analysis, cell clarification, process optimization, and sterile filtration; Combining clarification and sterilization in a one-step workflow eliminates the need to harvest the cells in a centrifugation step, saving considerable time, reducing plastic consumable waste, and streamlining laboratory processes compared to the conventional two-step cell clarification and sterilization process; Allows clarification and sterile 0.2 µm filtering of proteins from a cell culture sample in a single device and one workflow step; Easily and quickly filter/recover proteins from CHO, HEK, or other whole-cell suspensions with densities as high as 25 M cells/mL or more using either a vacuum manifold or centrifuge, speeding up cell line development and clone screening – cells, cell debris, and other biological aggregates are captured in the filter media and the filtrate collected by the 24-well collection plate contains proteins and other sub-0.2 µm particles; Ensures reliable recovery of > 95% of extracellular proteins from whole-cell cultures; Offers time savings, strong performance claims, and streamlined workflow improvements; Ideal for laboratories that desire faster and more efficient protein purification workflows; Designed to meet the ANSI/SLAS microplate standards; The rigid construction prevents the plate from flexing or jamming in robotic systems; Exhibits a smooth well design that provides consistency in filtration times as well as efficient sample recovery; Can be used with either a vacuum manifold or compatible centrifuge and is fully compatible with all major laboratory automation platforms; Recommended operating vacuum ≥ 25.4 cm Hg (10 in. Hg); Recommended working volume (max), 7 mL for vacuum and 6 mL for centrifugation; Typical hold-up volume of 450 µL per well which refers to the volume of liquid retained in a filter or housing; Supplied individually bagged with a V-shaped bottom collection plate and a polystyrene lid; Barcode labeling allows for easy sample tracking and identification

Advantage™ 1 mL 96-well diatomaceous earth filter plate

Advantage™ 1 mL 96-well filter plate; Packed with flux calcinated diatomaceous earth; Stable from pH 1-13; No pre-treatment of the bed is necessary; Offers a large surface area; Used for sample filtration; Provides a high throughput alternative to traditional liquid-liquid extraction techniques; Eliminates steps like mixing, centrifugation, and organic phase separation; Achieves accelerated solvent extraction; Compatible with the majority of 96-well vacuum manifolds; Application procedure: Upon addition to the filter plate, the aqueous mixture (e.g. plasma sample and internal standard in buffer solution, adjusted pH) will partition by gravity. The appropriate organic solvent is then added to the wells pushing the analyte of interest to partition from the adsorbed aqueous phase into the organic solvent as the latter slowly flows through the particle bed under gravity. The organic eluent is collected, evaporated to dryness, and finally reconstituted before being injected for analysis; NOTE: the displayed plate image is NOT representative of the product

Biotage ISOLUTE® SLE+ 200 µL 96-well SLE plate

Biotage, ISOLUTE® SLE+ Supported Liquid Extraction 96-well plate; 200 µL maximum load volume and 1x1 mL elution volume; Square wells; Packed with a highly processed, homogenous, modified form of diatomaceous earth, serving as a support for the liquid-liquid extraction process, but does not interact chemically with the aqueous sample and providing reproducible flow characteristics from sample to sample; Used in bioanalytical sample preparation for supported liquid extraction (SLE) of a diverse range of analytes from aqueous samples such as biological fluids (e.g. whole blood, plasma, serum, urine, and oral fluid) using a simple load-wait-elute procedure; Achieves high extraction efficiency – during SLE, the aqueous sample is absorbed onto the extraction bed and analytes are immobilized on the inert diatomaceous earth-based support material forming the interface for extraction (small droplets held in place by a network of pores). When applied, the organic phase flows through the support media allowing analytes to efficiently desorb and partition into the organic solvent before being collected for analysis; Aqueous samples and extraction solvents load evenly, an important feature when using automated sample preparation procedures; Provides high analyte recoveries, eliminates emulsion formation, reduces sample preparation time, and delivers a clean final extract free of interfering proteins and phospholipids, thereby alleviating matrix effects associated with biofluid analysis; Suited to automated workflows with no manual intervention necessary; Processing ISOLUTE® SLE+ plates is largely performed under gravity, with a pulse of vacuum or positive pressure used to initiate loading of the sample, and to maximize solvent recover after elution – both manual and automated, vacuum or positive pressure systems can be used; To prevent cross-talk when processing plates, well outlets should penetrate the collection plate correctly

**MACHEREY-NAGEL, NucleoSpin®
96 virus binding plate**

NucleoSpin® 96-well plate is used for rapid, simultaneous isolation of viral RNA and DNA from serum, plasma, or any cell/particle-free biological fluids, and is a central element of the NucleoSpin® 96 Virus full (Ref. # 740691.4) and reduced (Core kit, Ref. # 740452.4) kits; Each well features a blue ring, and a silica membrane for DNA/RNA binding and filtration; Suitable for manual and automated use; Processing possible under vacuum or by centrifugation; Sample volume 100-150 µL; Fragment size of 100 bp - approx. 50 kbp; Typical recovery > 90%; Theoretical binding capacity of 40 µg; Purified nucleic acids are suitable for applications such as PCR, real-time quantitative RT-PCR, and any kind of enzymatic assays; NOTE: The «NucleoSpin® 96 Virus Core kit» offers more flexibility than the «NucleoSpin® 96 Virus kit» mostly regarding the choice of consumables used for lysis, washing, and elution, and is primarily recommended for manual or automated vacuum processing

Oasis HLB 96-square well plate, 30 mg sorbent/well

The Oasis HLB 96-well plate contains Oasis HLB sorbent (30 mg per well), which is a universal strongly hydrophilic, reversed-phase, polymer with a unique Hydrophilic-Lipophilic Balance that was developed for the extraction of a wide range of acidic, basic, and neutral compounds from various matrices using a simple, generic protocol. The unique balance of hydrophobicity and water-wettability of the Oasis HLB sorbent ensure optimal results regardless of whether individual wells of the 96-well plate could dry out during the critical steps prior to sample loading. The Oasis HLB 96-well plate is designed to be used on many manifold configurations and most robotic liquid handling systems. The particle size is 30 µm. The pore size is 80 Å. The Oasis HLB sorbent is stable from pH 0 - 14

Oasis HLB 96-well μ Elution plate, 2 mg sorbent/well

The patented Oasis HLB 96-well μ Elution plate is designed for SPE clean-up and analyte enrichment of sample volumes ranging from 10 μ L to 375 μ L. Each well of the μ Elution plate contains 2 mg of the Oasis HLB sorbent, which is a universal strongly hydrophilic, reversed-phase, polymer with a unique Hydrophilic-Lipophilic Balance for extraction of a wide range of acidic, basic, and neutral compounds from various matrices using a simple, generic protocol. The innovative features of Oasis μ Elution plate enabled elution in only 25 μ L, resulting in sensitive, robust, reproducible results without evaporation and reconstitution. A 15-fold sample enrichment is possible with this plate. The Oasis HLB μ Elution plate is compatible with most liquid-handling robotic systems for automated, high throughput SPE. The particle size is 30 μ m. The pore size is 80 \AA . The Oasis HLB sorbent is stable from pH 0 - 14

Oasis method development 96-well μ Elution plate, 2 mg sorbent/well

The Oasis method development 96-well μ Elution plate is specially designed to carry out SPE method development. The patented 96-well plate format contains 3 columns of each of the four Oasis mixed-mode, ion-exchange chemistries (2 mg sorbent per well): strong and weak anion exchangers (MAX and WAX) and strong and weak cation exchangers (MCX and WCX). Sample preparation method development can be quickly and easily achieved with the use of only two SPE protocols. The Oasis Sorbent Selection μ Elution plate is compatible with most liquid-handling robotic systems for automated, high throughput SPE. The particle size is 30 μ m. The pore size is 80 Å. The Oasis sorbent is stable from pH 0 - 14

Oasis PRiME HLB 96-well μ Elution plate, 3 mg sorbent/well

The Oasis PRiME HLB 96-well μ Elution plate contains Oasis PRiME HLB sorbent (3 mg per well), which is an all-purpose, strongly hydrophilic, reversed-phase, water-wettable polymer with a unique Hydrophilic-Lipophilic Balance. Oasis PRiME HLB sorbent is designed to simplify solid-phase extraction (SPE) by taking advantage of the desirable water-wettable and retention characteristics of Oasis HLB sorbent technology while providing cleaner samples in fewer steps and excellent recoveries due to simpler protocols and the elimination of sorbent conditioning and equilibration steps. It enables reversed-phase clean-up of acidic, basic and neutral compounds from complex sample matrices. Oasis PRiME HLB produces cleaner samples by removing greater than 95% of common matrix interferences such as salts, proteins and phospholipids. Additionally, viscous samples can be processed with faster flows through the device and less plugging

Oasis PRiME MCX 96-well μ Elution plate, 2 mg sorbent/well

The Oasis PRiME MCX 96-well μ Elution plate contains Oasis PRiME MCX sorbent (2 mg per well), a Mixed-mode, strong Cation eXchange, reversed-phase, water-wettable polymer. Oasis MCX technology allows targeted clean-up of basic compounds with $pK_a \geq 4.5$. Oasis PRiME MCX combines the simplicity and cleanliness of Oasis PRiME HLB technology with the specificity of a cation-exchanger for basic compounds. It selectively retains and concentrates basic compounds while removing up to 99% of interfering phospholipids from complex biological matrices (e.g. serum, plasma, whole blood) using simple three- or four-step protocols that deliver cleaner samples faster than conventional mixed-mode solid phase extraction (SPE) methods. It provides high and reproducible target analyte recoveries. No conditioning or equilibration steps are required prior to use. The particle size is 30 μ m. The Oasis MCX sorbent is stable in organic solvents

Ostro protein precipitation & phospholipid removal 96-well plate

The Ostro pass-through sample preparation plate provides a novel solution for the rapid and simple removal of phospholipids from biological samples (e.g. plasma and serum) prior to LC/MS-MS analysis. Requiring minimal to no method development and using a simple protocol, the Ostro™ technology can be quickly implemented to optimize your laboratory's workflow. Providing cleaner, more reproducible extracts than competitive phospholipid removal devices or techniques (e.g. liquid-liquid extraction-LLE, protein precipitation-PPT and solid-supported liquid-liquid extraction-SSLE), The Ostro approach allows for more sensitive analyses, increased sample throughput, and reduced instrument downtime. Using a convenient 96-well format, in-well protein precipitation is performed with a single pass-through method, which provides consistent, high-quality results, including significant removal of phospholipids, optimal recovery for diverse analytes, and increased reproducibility for more robust methods. The sorbent weight is 25 mg. The Ostro sorbent is stable from pH 0 - 14

MICROELUTION PLATE VACUUM+

OneLab reference: [518.6000]

**Thermo Scientific™ HyperSep™
96-well PPT plate**

Thermo Scientific™ HyperSep™ 96-well Protein precipitation plate; Square wells; Made of polypropylene (PP) specially selected to ensure low extractables; Intended for simple, rapid protein precipitation (PPT) and filtration to separate and recover target small molecules from the protein matrix of complex biofluids, such as plasma or serum that can interfere with downstream analysis; Features a novel dual frit, hydrophobically treated matrix that ensures no “wetting out” of the filter and leakage of the sample through the plate before the application of vacuum; Frits are hydrophobic/oleophobic enabling only precipitation of proteins – sample/ acetonitrile are retained in the well to allow precipitation of the proteins only when the vacuum is applied; The pore size of the frits is optimized to allow ideal and consistent flow rate of the sample through each well when the vacuum is applied – results in better reproducibility from well to well and sample to sample; The non-specific binding property of the filter material maximizes the recovery of target analytes/compounds; Achieves effective removal of unwanted proteins using the CRASH method in which the protein is denatured with acetonitrile and the flocculant filtered out, allowing 96 samples to be processed at one time – protein ‘crashes’ out of solution and precipitates directly into each well when acetonitrile is added; Can process between 15-1600 µL of serum or plasma samples; Ideal for use in automated, high throughput systems; Constructed according to an industry-standard 96-well plate footprint

**Waters GlycoWorks™ HILIC
μElution plate**

Sep-Pak® 96-well plate for extraction of carbohydrates using solid phase extraction (SPE) technique; No evaporation necessary due to elution volumes as low as 25 µL; Ideal for removing contaminants (e.g. salts and detergents) from hydrophilic analytes, i.e., carbohydrates, prior to mass spectrometry analysis; Used in Waters GlycoWorks RapiFluor-MS N-Glycan kit for removing excess label and potential interferences, in particular labeling reaction byproducts; Features 5 mg sorbent - maximum binding capacity for 200 µg glycans; INSTRUCTIONS FOR USE: Store at room temperature in dry conditions upon reception/before use | After partial use store in the open pouch, squeeze out any air, fold over the open end of the pouch and seal with tape, then store in a desiccator

Waters Sirocco™ 96-well protein precipitation plate

Waters Sirocco™ 96-well protein precipitation plate, co-developed with Pall Life Sciences, is the most technologically advanced protein precipitation plate on the market. The Sirocco™ plate enables high-throughput «in-well» protein precipitation of biological samples, guaranteeing no cloudy filtrates or clogged devices. The 96-well plate comprises a unique filter system, a sealing cap mat, and a patented valve technology designed specifically to allow efficient «in-well» processing while preventing clogged wells, cross-talk or leaking during use. It provides optimum performance in faster processing time by reducing steps in «in-well» sample processing and complete recovery of clean filtrate from smaller plasma sample volumes

96-WELL FORMAT FILTER LABWARE

AcroPrep™ Advance 350 µL 96-well filter plate, 10K Omega membrane

AcroPrep™ Advance 96-well filter plate; 350 µL volume capacity; Round well shape; Well-bottom area of 0.25 cm²; Constructed from chemically resistant and biologically inert polypropylene (PP) – ensures maximum functionality while providing intrinsic low binding properties to nucleic acids (NA) and proteins, and durability when using harsh organic solvents, preventing unwanted extractables and leachables; Equipped with a Pall Omega™ membrane of 10K MWCO (Molecular weight cut-off = 10 kDa), which is a polyethersulfone (PES) membrane specifically modified to minimize protein and NA binding; Optimized for ultrafiltration, a membrane separation technique used to rapidly separate extremely small particles and dissolved molecules in fluids based on their molecular size, although other factors such as molecular shape and charge can also play a role – molecules larger than the membrane pores will be retained by the membrane and concentrated during the ultrafiltration process;

EXTRACTION+

OneLab reference: [518.7000]

AcroPrep™ Advance 350 µL 96-well filter plate, 10K Omega membrane

The low binding nature of the PES membrane guarantees high recovery ($\geq 90\%$) of target biomolecules at low concentration and less surface fouling, which can impede effective retention performance; Features a smooth well design that helps achieving faster, more uniform filtration rates across the plate (improving well-to-well and plate-to-plate consistency), as well as reduced hold-up volume for maximum sample recovery; Recommended working volume $\leq 300 \mu\text{L}$; Can be used on vacuum systems, with centrifugation, or with positive pressure systems; Recommended operating vacuum $\geq 25.4 \text{ cm Hg}$ (10 in. Hg); Typical vacuum filtration performance of 10K Omega membrane = 20 min processing time, 5 μL hold-up volume; Recommended centrifugal force 1,500 xg; Typical centrifugal filtration performance of 10K Omega membrane = 8 min processing time, 2 μL hold-up volume; Uses a unique sealing mechanism to individually seal filter media into each well of the plate, preventing crosstalk and reducing the risk of cross-contamination between wells; Exhibits optimized outlet tips that minimize sample leakage during incubation steps and reduce the presence of clinging droplets following filtration; Ideally used for PCR clean-up, labelling clean-up, nucleic acid (DNA/RNA) purification, protein purification/separation by size exclusion, and free vs. bound protein assays; Suitable for high throughput procedures; Automation compatible – manufactured to meet the ANSI/SLAS microplate standards, allowing plates to be run in manual, semi-automated, and automated processes; The rigid, one-piece construction prevents the plate from flexing or jamming in robotic systems; Labeled wells facilitate easy sample identification; Each filter plate has a serialized barcode label that allows for easy, automated sample tracking and identification; The notch on the plate determines correct plate orientation; Features a smooth top surface and a textured window on the side of the plate for easy labelling

Advantage™ 2 mL 96-well diatomaceous earth filter plate

Advantage™ 2 mL 96-well filter plate; Packed with flux calcinated diatomaceous earth; Stable from pH 1-13; No pre-treatment of the bed is necessary; Offers a large surface area; Used for sample filtration; Provides a high throughput alternative to traditional liquid-liquid extraction techniques; Eliminates steps like mixing, centrifugation, and organic phase separation; Achieves accelerated solvent extraction; Compatible with the majority of 96-well vacuum manifolds; Application procedure: Upon addition to the filter plate, the aqueous mixture (e.g. plasma sample and internal standard in buffer solution, adjusted pH) will partition by gravity. The appropriate organic solvent is then added to the wells pushing the analyte of interest to partition from the adsorbed aqueous phase into the organic solvent as the latter slowly flows through the particle bed under gravity. The organic eluent is collected, evaporated to dryness, and finally reconstituted before being injected for analysis; NOTE: the displayed plate image is NOT representative of the product

Biotage ISOLUTE® SLE+ 200 µL 96-well SLE plate

Biotage, ISOLUTE® SLE+ Supported Liquid Extraction 96-well plate; 200 µL maximum load volume and 1x1 mL elution volume; Square wells; Packed with a highly processed, homogenous, modified form of diatomaceous earth, serving as a support for the liquid-liquid extraction process, but does not interact chemically with the aqueous sample and providing reproducible flow characteristics from sample to sample; Used in bioanalytical sample preparation for supported liquid extraction (SLE) of a diverse range of analytes from aqueous samples such as biological fluids (e.g. whole blood, plasma, serum, urine, and oral fluid) using a simple load-wait-elute procedure; Achieves high extraction efficiency – during SLE, the aqueous sample is absorbed onto the extraction bed and analytes are immobilized on the inert diatomaceous earth-based support material forming the interface for extraction (small droplets held in place by a network of pores). When applied, the organic phase flows through the support media allowing analytes to efficiently desorb and partition into the organic solvent before being collected for analysis; Aqueous samples and extraction solvents load evenly, an important feature when using automated sample preparation procedures; Provides high analyte recoveries, eliminates emulsion formation, reduces sample preparation time, and delivers a clean final extract free of interfering proteins and phospholipids, thereby alleviating matrix effects associated with biofluid analysis; Suited to automated workflows with no manual intervention necessary; Processing ISOLUTE® SLE+ plates is largely performed under gravity, with a pulse of vacuum or positive pressure used to initiate loading of the sample, and to maximize solvent recover after elution – both manual and automated, vacuum or positive pressure systems can be used; To prevent cross-talk when processing plates, well outlets should penetrate the collection plate correctly

**Oasis HLB 96-well μ Elution plate,
2 mg sorbent/well**

The patented Oasis HLB 96-well μ Elution plate is designed for SPE clean-up and analyte enrichment of sample volumes ranging from 10 μ L to 375 μ L. Each well of the μ Elution plate contains 2 mg of the Oasis HLB sorbent, which is a universal strongly hydrophilic, reversed-phase, polymer with a unique Hydrophilic-Lipophilic Balance for extraction of a wide range of acidic, basic, and neutral compounds from various matrices using a simple, generic protocol. The innovative features of Oasis μ Elution plate enabled elution in only 25 μ L, resulting in sensitive, robust, reproducible results without evaporation and reconstitution. A 15-fold sample enrichment is possible with this plate. The Oasis HLB μ Elution plate is compatible with most liquid-handling robotic systems for automated, high throughput SPE. The particle size is 30 μ m. The pore size is 80 Å. The Oasis HLB sorbent is stable from pH 0 - 14

**Oasis peptide method development
96-well μ Elution plate,
2 mg sorbent/well**

The Oasis peptide method development 96-well μ Elution plate is designed to simplify the process of sample preparation for the analysis of therapeutic peptides in plasma. The 96-well plate format contains 6 columns of each of two Oasis mixed-mode, ion-exchange chemistries (2 mg sorbent per well): a strong exchanger (MAX) and a weak cation exchanger (WCX). Sample preparation method development can be quickly and easily achieved with the use of a single SPE protocol. The Oasis peptide μ Elution method development plate is sold separately or as a component of the UPLC Therapeutic Peptide Method Development Kit (waters, p/n 176001835) and the HPLC Therapeutic Peptide Method Development Kit (waters, p/n 176001836). The particle size is 30 μ m. The pore size is 80 Å. The Oasis sorbent is stable from pH 0 - 14

Oasis PRiME HLB 96-well μ Elution plate, 3 mg sorbent/well

The Oasis PRiME HLB 96-well μ Elution plate contains Oasis PRiME HLB sorbent (3 mg per well), which is an all-purpose, strongly hydrophilic, reversed-phase, water-wettable polymer with a unique Hydrophilic-Lipophilic Balance. Oasis PRiME HLB sorbent is designed to simplify solid-phase extraction (SPE) by taking advantage of the desirable water-wettable and retention characteristics of Oasis HLB sorbent technology while providing cleaner samples in fewer steps and excellent recoveries due to simpler protocols and the elimination of sorbent conditioning and equilibration steps. It enables reversed-phase clean-up of acidic, basic and neutral compounds from complex sample matrices. Oasis PRiME HLB produces cleaner samples by removing greater than 95% of common matrix interferences such as salts, proteins and phospholipids. Additionally, viscous samples can be processed with faster flows through the device and less plugging

Oasis PRiME MCX 96-well μ Elution plate, 2 mg sorbent/well

The Oasis PRiME MCX 96-well μ Elution plate contains Oasis PRiME MCX sorbent (2 mg per well), a Mixed-mode, strong Cation eXchange, reversed-phase, water-wettable polymer. Oasis MCX technology allows targeted clean-up of basic compounds with $pK_a \geq 4.5$. Oasis PRiME MCX combines the simplicity and cleanliness of Oasis PRiME HLB technology with the specificity of a cation-exchanger for basic compounds. It selectively retains and concentrates basic compounds while removing up to 99% of interfering phospholipids from complex biological matrices (e.g. serum, plasma, whole blood) using simple three- or four-step protocols that deliver cleaner samples faster than conventional mixed-mode solid phase extraction (SPE) methods. It provides high and reproducible target analyte recoveries. No conditioning or equilibration steps are required prior to use. The particle size is 30 μ m. The Oasis MCX sorbent is stable in organic solvents

Ostro protein precipitation & phospholipid removal 96-well plate

The Ostro pass-through sample preparation plate provides a novel solution for the rapid and simple removal of phospholipids from biological samples (e.g. plasma and serum) prior to LC/MS-MS analysis. Requiring minimal to no method development and using a simple protocol, the Ostro™ technology can be quickly implemented to optimize your laboratory's workflow. Providing cleaner, more reproducible extracts than competitive phospholipid removal devices or techniques (e.g. liquid-liquid extraction-LLE, protein precipitation-PPT and solid-supported liquid-liquid extraction-SSLE), The Ostro approach allows for more sensitive analyses, increased sample throughput, and reduced instrument downtime. Using a convenient 96-well format, in-well protein precipitation is performed with a single pass-through method, which provides consistent, high-quality results, including significant removal of phospholipids, optimal recovery for diverse analytes, and increased reproducibility for more robust methods. The sorbent weight is 25 mg. The Ostro sorbent is stable from pH 0 - 14

Thermo Scientific™ HyperSep™ 96-well PPT plate

Thermo Scientific™ HyperSep™ 96-well Protein precipitation plate; Square wells; Made of polypropylene (PP) specially selected to ensure low extractables; Intended for simple, rapid protein precipitation (PPT) and filtration to separate and recover target small molecules from the protein matrix of complex biofluids, such as plasma or serum that can interfere with downstream analysis; Features a novel dual frit, hydrophobically treated matrix that ensures no “wetting out” of the filter and leakage of the sample through the plate before the application of vacuum; Frits are hydrophobic/oleophobic enabling only precipitation of proteins – sample/ acetonitrile are retained in the well to allow precipitation of the proteins only when the vacuum is applied; The pore size of the frits is optimized to allow ideal and consistent flow rate of the sample through each well when the vacuum is applied – results in better reproducibility from well to well and sample to sample; The non-specific binding property of the filter material maximizes the recovery of target analytes/compounds; Achieves effective removal of unwanted proteins using the CRASH method in which the protein is denatured with acetonitrile and the flocculant filtered out, allowing 96 samples to be processed at one time – protein ‘crashes’ out of solution and precipitates directly into each well when acetonitrile is added; Can process between 15-1600 μ L of serum or plasma samples; Ideal for use in automated, high throughput systems; Constructed according to an industry-standard 96-well plate footprint

Waters Sirocco™ 96-well protein precipitation plate

Waters Sirocco™ 96-well protein precipitation plate, co-developed with Pall Life Sciences, is the most technologically advanced protein precipitation plate on the market. The Sirocco™ plate enables high-throughput «in-well» protein precipitation of biological samples, guaranteeing no cloudy filtrates or clogged devices. The 96-well plate comprises a unique filter system, a sealing cap mat, and a patented valve technology designed specifically to allow efficient «in-well» processing while preventing clogged wells, cross-talk or leaking during use. It provides optimum performance in faster processing time by reducing steps in «in-well» sample processing and complete recovery of clean filtrate from smaller plasma sample volumes

Oasis HLB 6 cc Vac cartridge, 150 mg sorbent, 30 µm, racked

The Oasis HLB 6 cc Vac cartridge with 150 mg sorbent is loaded into the Extraction+ 6cc cartridge rack that accommodates up to 12 cartridges. The Oasis HLB 6 cc cartridge contains the Oasis HLB sorbent (150 mg sorbent per cartridge), which is a universal polymeric reversed-phase sorbent developed for the extraction of a wide range of acidic, basic, and neutral compounds from various matrices using a simple, generic protocol. The Oasis HLB sorbent is water wettable and therefore maintains its capability for higher retention and excellent recoveries even if the sorbent runs dry. This means that there is no need to take extraordinary steps to keep the sorbent beds from drying out during the critical steps prior to sample loading. The syringe-barrel-type cartridge is designed for use with vacuum manifolds and automated SPE instruments. The barrel size is 6 cc. The particle size is 30 µm. Pore size is 80 Å. The Oasis HLB sorbent is stable from pH 0 - 14

24-WELL/POSITION FORMAT FILTER LABWARE

AcroPrep™ 7 mL 24-well Cell Clarification and Sterile Filtration plate

AcroPrep 24-well cell clarification and sterile filtration filter plate; 7 mL volume capacity; Square well shape; 1.6 cm² effective filtration area; Constructed from chemically-resistant and biologically-inert polypropylene; Utilizes Pall proprietary high-performance multi-layer filtration media and membranes integrated into one device – each well contains a Pall Seitz® depth media that efficiently captures whole cells and large cellular debris layered on top of a 0.65/0.2 µm asymmetric Supor® EKV PES (Hydrophilic polyethersulfone) membrane that provides an efficient sterile filtration layer; The Seitz depth media allows clarification of large cellular debris prior to filtration through the 0.65/0.2 µm EKV Supor membrane; The depth filter media have a high particulate holding capacity and will protect downstream microporous membrane filters from quickly clogging; Intrinsic plate and membrane properties minimize sample loss from non-specific binding while ensuring fast filtration with superior flow rates; Offers a one-and-done solution for protein purification and general sterile filtration workflows in a 24-well format; Suitable for use in a variety of applications including clone selection and clone candidate analysis, cell expansion studies, recombinant protein isolation prior to analysis, cell clarification, process optimization, and sterile filtration; Combining clarification and sterilization in a one-step workflow eliminates the need to harvest the cells in a centrifugation step, saving considerable time, reducing plastic consumable waste, and streamlining laboratory processes compared to the conventional two-step cell clarification and sterilization process; Allows clarification and sterile 0.2 µm filtering of proteins from a cell culture sample in a single device and one workflow step; Easily and quickly filter/recover proteins from CHO, HEK, or other whole-cell suspensions with densities as high as 25 M cells/mL or more using either a vacuum manifold or centrifuge, speeding up cell line development and clone screening – cells, cell debris, and other biological aggregates are captured in the filter media and the filtrate collected by the 24-well collection plate contains proteins and other sub-0.2 µm particles; Ensures reliable recovery of > 95% of extracellular proteins from whole-cell cultures; Offers time savings, strong performance claims, and streamlined workflow improvements; Ideal for laboratories that desire faster and more efficient protein purification workflows; Designed to meet the ANSI/SLAS microplate standards; The rigid construction prevents the plate from flexing or jamming

The Oasis HLB sorbent is water wetttable and therefore maintains its capability for higher retention and excellent recoveries even if the sorbent runs dry. This means there is no need to take extraordinary steps to keep the sorbent beds from drying out during the critical steps prior to sample loading. The syringe-barrel-type cartridge is designed for use with vacuum manifolds and automated SPE instruments. The barrel size is 3 cc. The particle size is 30 µm. Pore size is 80 Å. The Oasis HLB sorbent is stable from pH 0 - 14

**Oasis PRiME MCX 1 cc Vac cartridge,
30 mg sorbent, 30 µm, racked**

The Oasis PRiME MCX 1 cc Vac cartridge with 30 mg sorbent is loaded into the Extraction+ 1cc cartridge rack that accommodates up to 24 cartridges. The Oasis PRiME MCX 1 cc Vac cartridge contains Oasis PRiME Mixed-mode, strong Cation eXchange (MCX) sorbent (30 mg per cartridge), which is built upon the unique water-wettable Oasis PRiME HLB polymer. The Oasis PRiME MCX sorbent provides both reversed-phase and ion exchange modes of retention, enabling greater clean-up selectivity and sensitivity for basic compounds. Using Oasis PRiME MCX sorbent, improved sample clean-up is achieved with simple and fast SPE protocols (no conditioning and equilibration steps are required). Up to 99% of phospholipids are removed from complex sample matrices while providing high and reproducible target analyte recoveries. The syringe-barrel-type cartridge is designed for use with vacuum manifolds and automated SPE instruments. The barrel size is 1 cc. The particle size is 30 µm. The Oasis PRiME MCX sorbent is stable in organic solvents

11.....	 ArcticWhite, 290 mL single cavity reservoir
14.....	 Axygen® 96 V-bottom single well reservoir

IMPORTANT

To use a mono-well reservoir with Extraction+ as an alternative to the continuous waste collection option integrated with the device, it should be supported by the Collection Labware Rack Domino (Waters P/N 186010523).

EXTRACTION+ KITS

For Plate-based SPE Workflows

Extraction+ Plate Kit

176005203

The Extraction+ Plate Kit includes 2x 3mm spacers, 1x 15mm spacer, 1x 17mm spacer, 5x adhesive plate seals, 1x Storage Plate Domino, and 1x Deepwell Microplate Domino

24X

For 1 cc Cartridge-based SPE Workflows

Extraction+ 1 cc Cartridge Kit

176005204

The Extraction+ 1 cc Cartridge Kit includes 1x 1 cc Cartridge Adaptor, 1x Ø12mm Vial Collection Rack, 1x Collection Labware Rack Domino, and a pack of 1 cc sealing caps (x24)

24X

For 3 cc Cartridge-based SPE Workflows

Extraction+ 3 cc Cartridge Kit

176005205

The Extraction+ 3 cc Cartridge Kit includes 1x 3 cc Cartridge Adaptor, 1x Ø12mm Vial Collection Rack, 1x Collection Labware Rack Domino, and a pack of 3 cc sealing caps (x24)

12X

For 6 cc Cartridge-based SPE Workflows

Extraction+ 6 cc Cartridge Kit

176005206

The Extraction+ 6 cc Cartridge Kit includes 1x 6 cc Cartridge Adaptor, 1x 5mL Tube Collection Rack, 1x Collection Labware Rack Domino, and a pack of 6 cc sealing caps (x12)
